- This report introduces the price drivers of China zinc futures from four core dimensions: demand, supply, inventory, and cost & basis, clarifying the intrinsic connections between macroeconomic indicators, industrial policies, and zinc market fluctuations, and providing a comprehensive analysis for market participants as a reference.
- Zinc futures prices are jointly driven by multiple factors. Long-term trends are determined by macroeconomics and industrial policies, medium-term fluctuations are affected by supply-demand structure and inventory changes, and short-term volatility is influenced by costs, basis, and seasonal factors. The infrastructure, real estate, automotive, and home appliance industries are key observation targets, and overseas economic trends and energy policies also play an important role in the market.
- 本研究框架从需求、供给、库存、成本与基差四大核心维度，分析中国锌期货的价格驱动因素与市场趋势，厘清宏观经济指标、产业政策与锌市场波动的内在关联，为市场参与者提供系统性分析参考。锌期货价格受多因素共同驱动：长期趋势由宏观经济与产业政策决定，中期波动受供需结构与库存变动影响，短期震荡则受成本、基差及季节性因素制约。基建、地产、家电汽车行业是核心观测对象，海外经济走势与能源政策也对市场起到重要调节作用。

Risks: Basis Fluctuation, Operational Risk, Policy Changes, Economic Fluctuations , etc. **风险提示:** 基差波动、操作风险、政策变化、经济波动等

Demand

需求

01

1.1 Macro Demand

宏观需求

- GDP and fixed asset investment (FAI) are correlated with the long-term trend of zinc demand.
- Changes in the economic structure affect steel consumption intensity per unit of GDP/fixed asset investment. However, both the difficulty and error of estimation are relatively large, and short-term demand cannot be judged accurately.
- GDP and固定资产投资与锌需求的长期趋势相关。
- 经济结构变化影响单位GDP/固投耗钢强度，但预估难度和误差均较大，且无法判断短期需求。

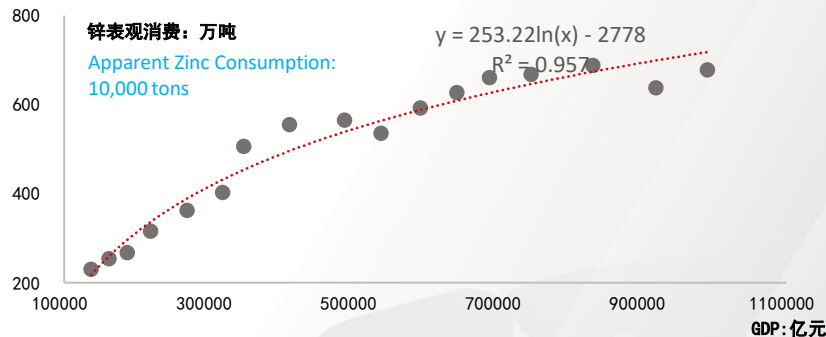

Trends in Zinc Consumption per Unit of GDP and FAI

单位GDP耗锌量与单位固投耗锌量走势

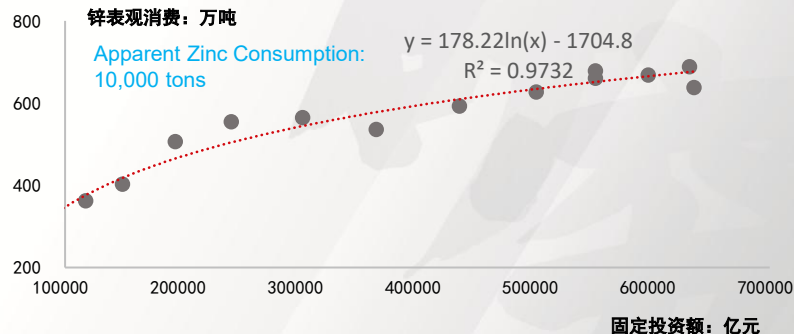

Relationship between Apparent Zinc Consumption and GDP

锌表观消费量与GDP的关系

Relationship between Apparent Zinc Consumption and FAI

锌表观消费量与固定资产投资额的关系

1.1 Macro Demand

宏观需求

- Apparent consumption is the basis of actual consumption and can relatively truly reflect changes in consumption. Actual demand can be reflected by apparent consumption plus zinc social inventory.
- 表观消费是实际消费的基础，可较为真实的反应消费变化。实际需求可通过表观消费+锌社会库存反应。

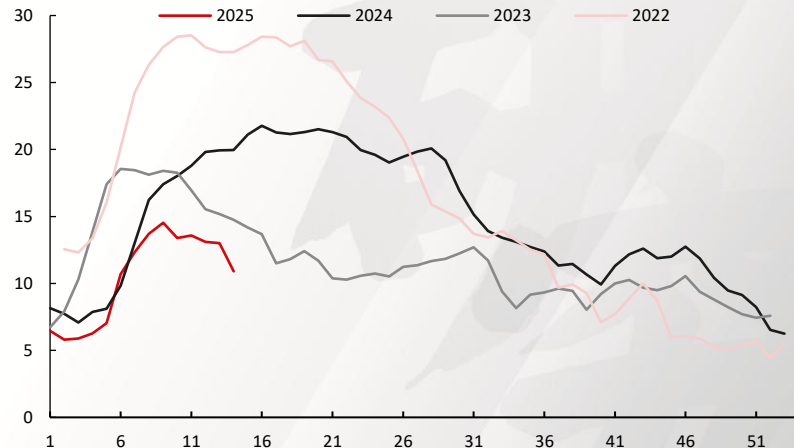

China's Apparent Zinc Consumption Unit: 10,000 tons

中国锌表观消费 单位：万吨

China's Zinc Social Inventory Unit: 10,000 tons

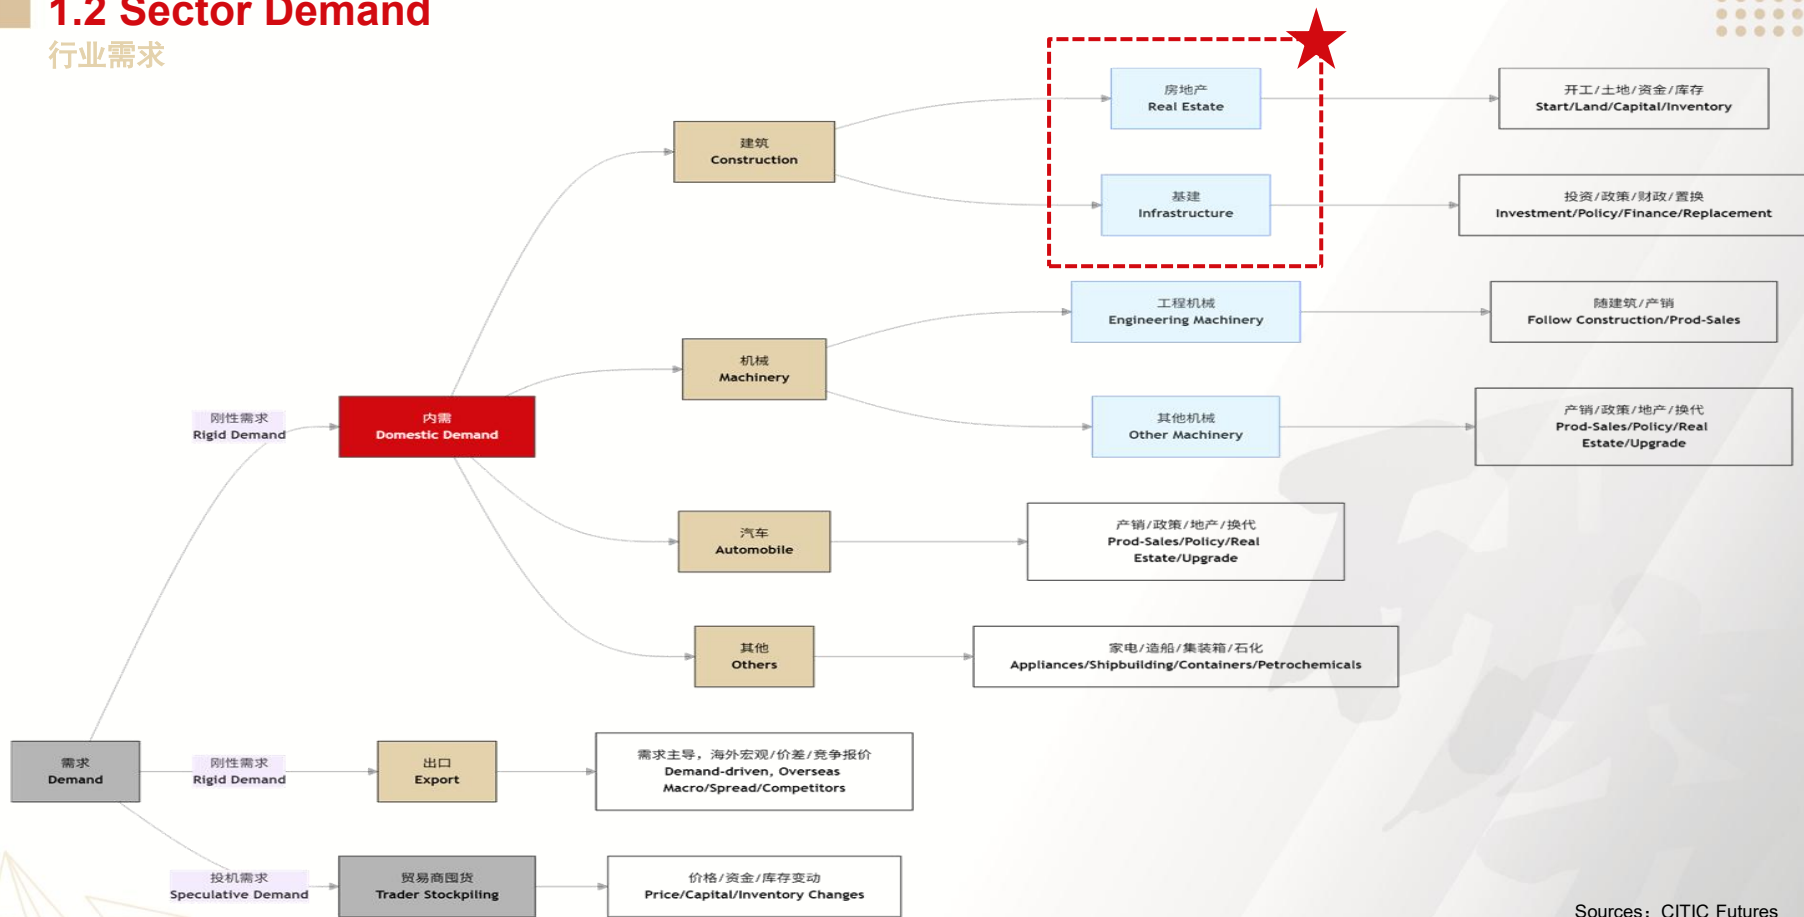

中国锌社会库存 单位：万吨

1.2 Sector Demand

行业需求

Sources: CITIC Futures

This report is not a service under the futures trading consulting business. The opinions and information provided are for reference only and do not constitute investment advice to anyone. CITIC Futures do not consider relevant personnel as client due to the attention, receipt, or reading of this report

本报告非期货交易咨询业务项下服务，其中的观点和信息仅作参考之用，不构成对任何人的投资建议。我司不会因为关注、收到或阅读本报告内容而视相关人员为客户；市场有风险，投资需谨慎。

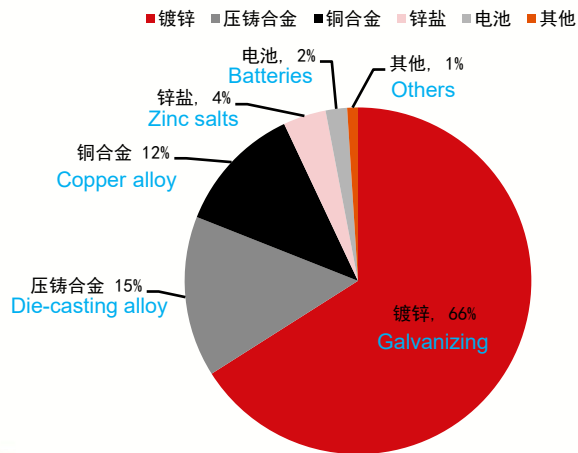

1.2 Sector Demand

行业需求

- The operating rate of primary zinc consumption indirectly reflects the strength of zinc consumption. Among them, galvanizing processing accounts for 66%, die-casting alloy for 15%, copper alloy for 12%, zinc salts for 2%, and batteries for 1%.
- In end-use zinc consumption, infrastructure and real estate are the main components. Specifically, infrastructure accounts for 26%, real estate for 21.5%, transportation for 18%, household goods for 14%, and machinery for 6.5%.
- 锌初端消费开工率间接反映锌消费强弱，其中镀锌加工占比66%，压铸合金占比15%，铜合金占比12%，锌盐占比2%，电池占比1%。
- 锌终端消费中基建与地产占主要部分，其中基础设施占比26%，地产占比21.5%，交通占18%，家用品占14%，机械占6.5%。

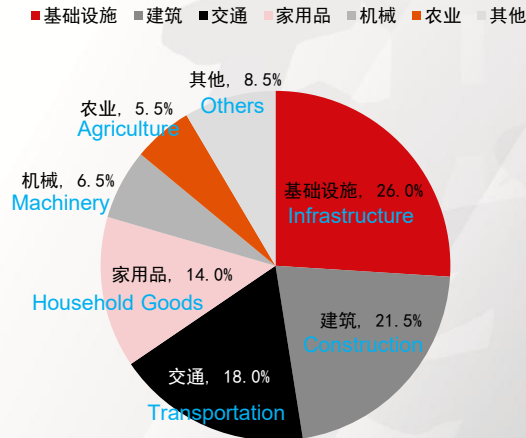

Distribution of Primary Zinc Consumption

锌的初端消费分布

Distribution of End-Use Zinc Consumption

锌的终端消费分布

Sources: SMM Wind CITIC Futures

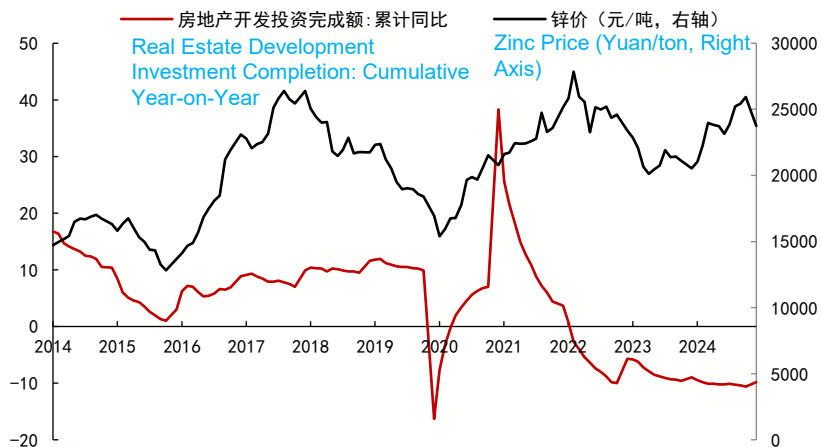

1.2.1 Sector Demand: Real Estate

行业需求：房地产

- The real estate cycle is highly correlated with the zinc price cycle: real estate investment and new construction starts are basically synchronized with the zinc price cycle.
- 房地产周期和锌价周期高度相关：房地产投资和新开工基本同步于锌价周期。

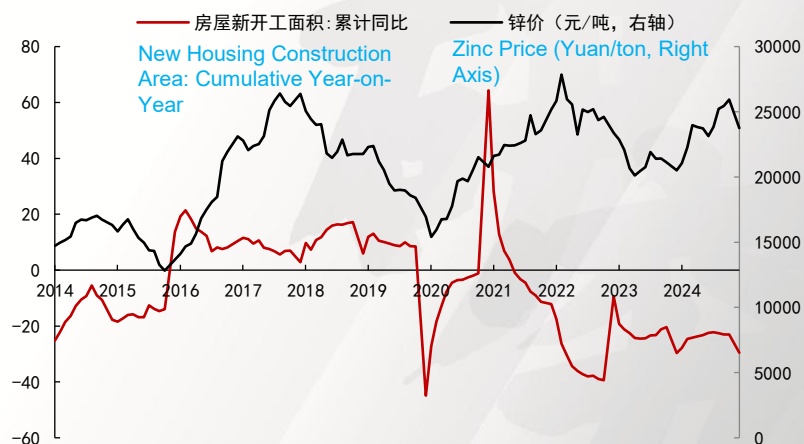

Real Estate Investment is basically synchronized with zinc prices

房地产投资基本同步于锌价

Real estate new starts are also basically synchronized with zinc prices

房地产新开工也基本同步于锌价

1.2.2 Sector Demand: Infrastructure

行业需求：基建

- Before 2011, real estate and infrastructure grew rapidly. After the 2008 global financial crisis, infrastructure investment gradually became the main sector for zinc demand. After 2011, infrastructure served as a tool for counter-cyclical adjustment, and the positive correlation between zinc consumption and infrastructure investment growth remained significant. In recent years, with stringent regulation on the real estate sector, the growth rate of real estate development has remained at a low level, while infrastructure has been relatively weak due to constraints from local governments' debt resolution.
- 2011年前，房地产和基建快速增长，2008年金融危机后基建投资逐渐成为支撑锌需求的主要因素。2011年后，基建成为逆周期调整的手段，锌消费和基建投资增速的正相关仍然明显。近几年地产强监管，房地产开发增速处于低位，但基建受制于地方政府化债相对较弱。

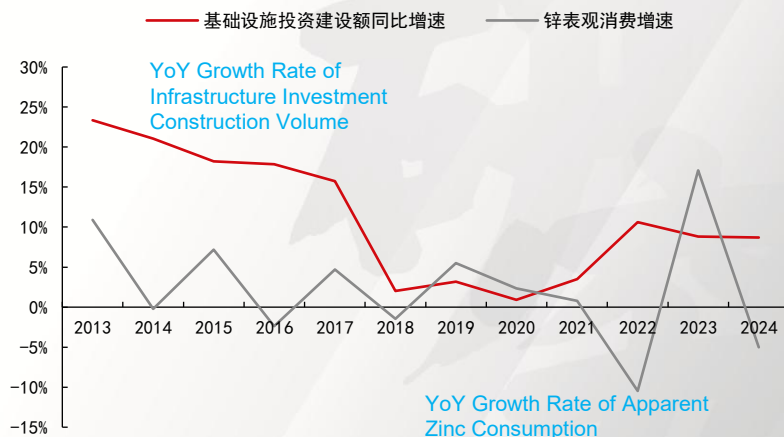

Infrastructure investment has become a means of counter-cyclical adjustment.

基建投资成为了逆周期调整的手段

Zinc consumption is positively correlated with infrastructure investment.

锌消费与基建投资正相关

Sources: SMM Wind CITIC Futures

1.2.3 Sector Demand: Home Appliances and Automobiles

行业需求：家电汽车

- Galvanizing is widely used in automobile bodies, body panels, exhaust pipes, fuel tanks, cargo containers, etc. The higher the grade of the vehicle, the greater the demand for galvanizing. The automotive industry will be a key market for galvanized sheets in the future.
- Zinc demand in the automotive industry is mainly assessed based on automobile production and sales volume (seasonality), industry policies, inventory levels, and other factors.
- 汽车车身、覆盖件、排气管、油箱、货柜等广泛镀锌。车型越高档，镀锌需求量越高。汽车行业是未来镀锌板的重要发展方向。
- 主要通过汽车产销量（季节性）、行业政策、库存情况等来观测汽车的用锌需求。

Zinc demand in automobile production increases with the elevation of vehicle classes.

汽车生产中锌需求量随车型等级升高而增加

车企 Auto Maker	车型 Model	冷轧板 Cold Rolled Sheet	热镀锌 Hot Dip Galvanized	电镀锌 Electrogalv anized	镀锌合计 Total Galvanized
上海大众 Shanghai VW	高档车型 Premium Model A	400	200	300	500
	中档车型 Mid-range Model B	400	230	100	330
	小型车 Compact Car C	300	210	70	280
一汽大众 FAW VW	中档车型 Mid-range B	360	260	130	390

There is a consistency between zinc price changes and automobile sales volume.

锌价变化与汽车销量有良好的一致性

Sources: Wind CITIC Futures

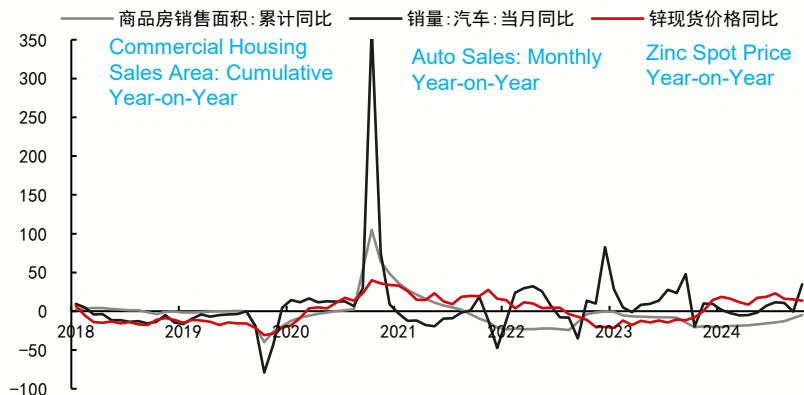

1.2.3 Sector Demand: Home Appliances and Automobiles

行业需求：家电汽车

- Real estate affects many industries such as automobiles, machinery, and home appliances, and their prosperity is highly correlated with real estate sales.
- The cyclical consistency between the real estate industry, the automotive industry, and the home appliance industry means that the downstream terminal demand for zinc is prone to resonate.
- 房地产影响着汽车、机械、家电等众多行业，相关行业景气度和地产销售高度相关。
- 房地产行业与汽车家电行业周期的一致性，意味着锌下游终端需求容易共振。

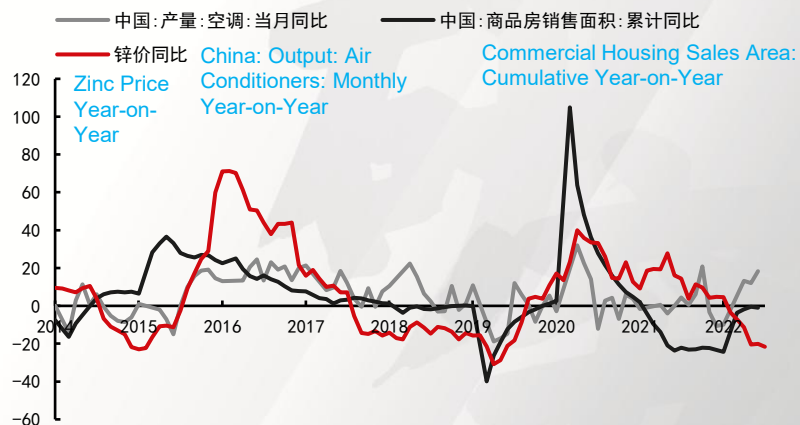

The sales cycles of real estate and automobiles are basically synchronized, and they lead zinc prices.

房地产和汽车销售周期基本同步，领先于锌价

The cycles of real estate and zinc lead the sales cycle of home appliances.

房地产和锌周期领先于家电销售周期

1.2.4 Sector Demand: Exports

行业需求：出口

- Zinc exports are dominated by indirect exports, while the volume of direct exports is limited.
- Direct exports are significantly affected by domestic and foreign price spreads; indirect exports are related to the overseas economy, and the average manufacturing PMI of Europe and the United States leads the export value of China's mechanical equipment by about 5 months.
- 锌出口以间接出口为主，直接出口量有限。
- 直接出口受内外价差显著影响；间接出口和海外经济相关，欧美制造业PMI均值领先于中国机械设备出口金额约5个月。

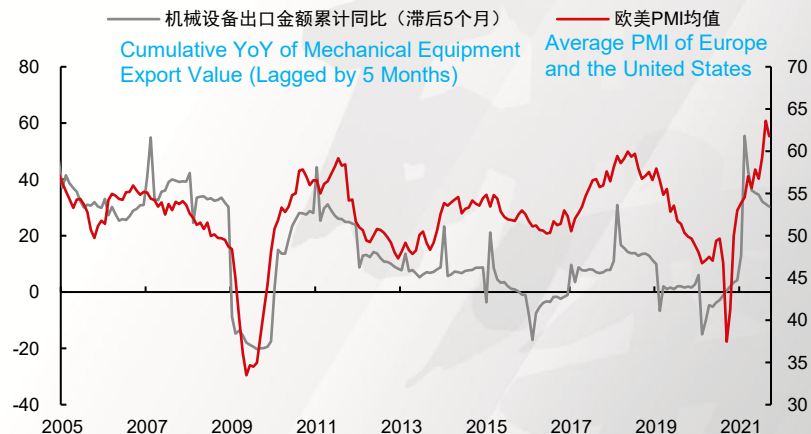

Proportion of Zinc Direct Exports and Proportion of Zinc Indirect Exports

锌直接出口占比及间接出口占比

Zinc indirect exports are highly correlated with the overseas economy.

Supply

供给

02

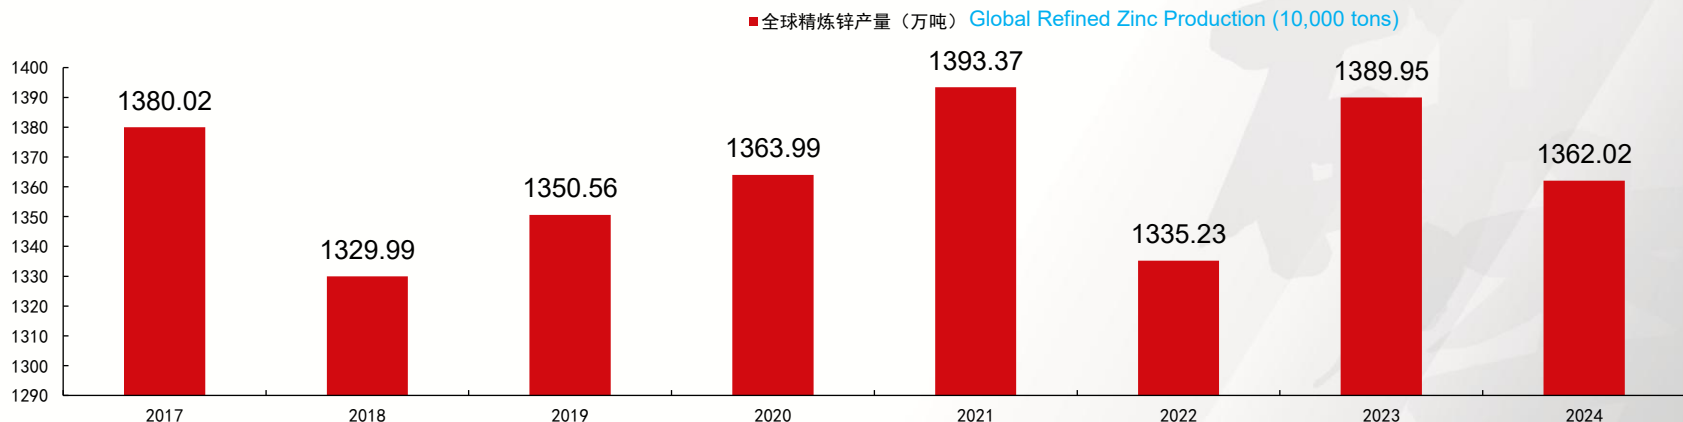

2.1 Capacity Deployment

投放产能

- China is the key to changes in global zinc refining capacity. Since 2017, China's zinc refining capacity has peaked, with effective capacity maintaining a high and stable level of 6.5-6.7 million tons in recent years. Overseas capacity has shown a slight contraction trend: CRU data shows it peaked at 8.81 million tons in 2011, shrank to around 8.6 million tons from 2012 to 2015, and further slid below 8.5 million tons in recent years.
- 全球精锌产能的变化重点在中国。2017年以来中国精锌产能已达峰，近几年有效产能维持650-670万吨的高位平稳水平。国外产能呈现小幅收缩的态势，CRU数据显示2011年达到881万吨的高峰，2012-2015年收缩至860万吨左右，近几年产能进一步下滑至850万吨以下。

Global Refined Zinc Production Unit: 10,000 tons

全球精炼锌产量 单位：万吨

2.2 Energy Consumption Policies

能耗政策

- In 2021, the Two Sessions set an energy consumption target: a 3% reduction in energy intensity compared with 2020. With energy consumption indicators assessed across regions, domestic zinc supply-side disruptions increased. Production restrictions became the most direct way to reduce consumption in some areas, with prominent contradictions in Yunnan, Inner Mongolia and Hunan in Q3.
- China will implement a carbon levy, requiring zinc smelting enterprises to purchase quotas. It is expected zinc smelting cost per ton will increase by about 155.4 yuan.
- 2021年“两会”定下能耗目标为能耗强度较2020年下降3%，对各地区的能耗指标进行考核，国内锌供给端干扰增加，且限产成为部分地区最直接的降耗方式，其中云南、内蒙古和湖南在第三季度矛盾较为突出。
- 国内将实施碳排放征收，锌冶炼企业将需要购买配额，预计每吨锌冶炼成本将增加约155.4元。

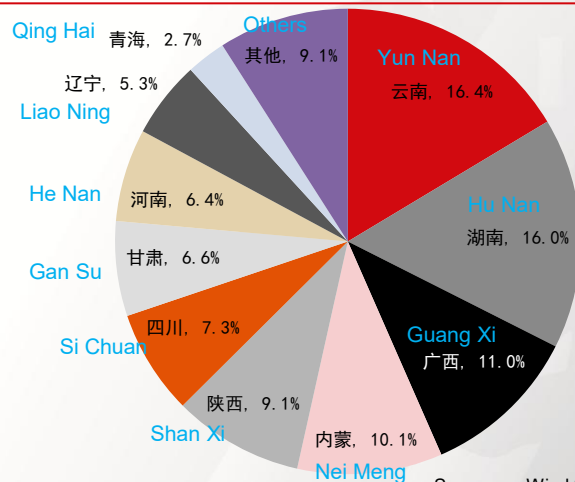

China's Refined Zinc Production Unit: 10,000 tons

中国精炼锌产量 单位：万吨

Distribution of China's Zinc Smelting Capacity

中国锌冶炼产能分布

Sources: Wind SMM CITIC Futures

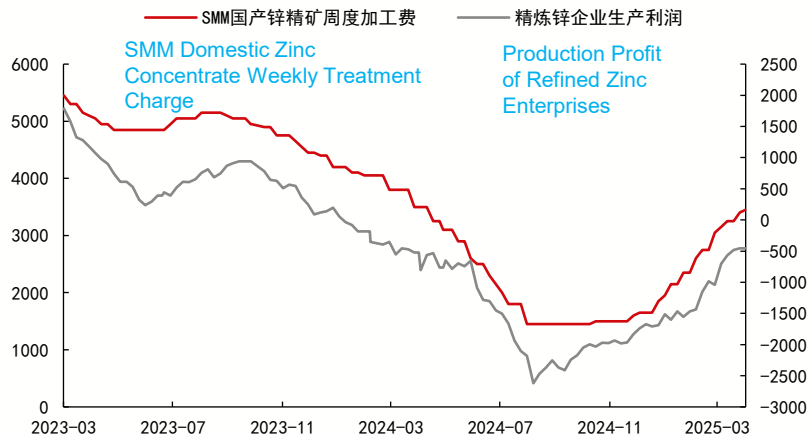

2.3 Profit-Driven

利润驱动

- Whether it is before or after supply-side reform and production restrictions for environmental protection, zinc smelting output has always been generally driven by profits. But affected by policies, the sensitivity to profit fluctuations has changed.
- 供给侧改革和环保限产前后，锌冶炼产量总体均受利润驱动。但受政策影响，对利润波动的敏感程度会发生变化。

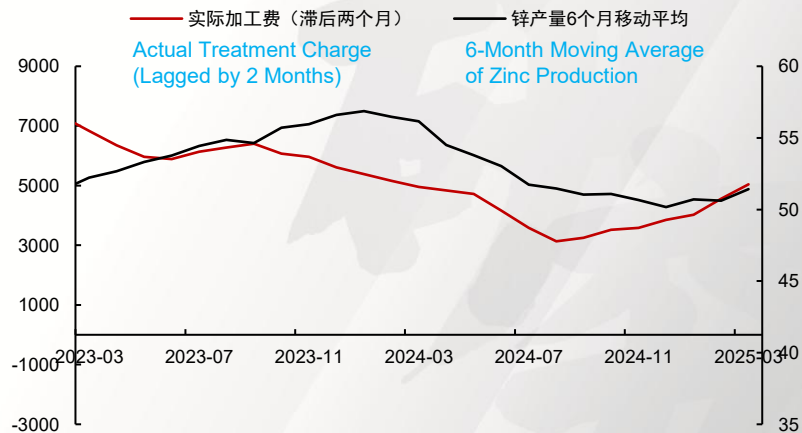

Zinc Smelting Profit Related to Zinc Price and Processing Fee Unit: CNY/ton

锌冶炼利润与锌价和加工费相关 单位：元/吨

Inventory

库存

03

3.1 Inventory-Price Relationship

库存-价格关系

- Inventory and spot prices sometimes show a positive correlation. During economic upturns, traders tend to stock up, pushing total inventory higher; during downturns, traders reduce stockpiling, leading to lower total inventory.
- In periods of relatively stable demand, inventory and prices have an inverse relationship, with industry dynamics driving price fluctuations. That is, rising inventory leads to falling prices, while falling inventory pushes prices up.
- 库存和现货价格有时呈正向关系。经济上行阶段，贸易商倾向于囤货，总库存上升；经济下行阶段，贸易商减少囤货，总库存下降。
- 而在需求相对平稳的时期，库存呈现出和价格相反的关系，产业驱动决定价格波动。即库存上升，价格下跌；库存下降，价格上升。

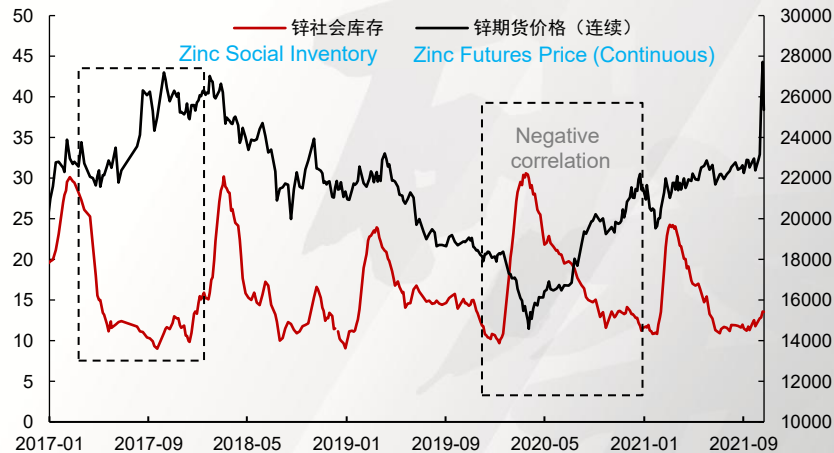

Positive Correlation Between Price and Inventory Unit: 10,000 tons, RMB/ton

价格和库存的正向关系时期 单位：万吨、元/吨

Negative Correlation Between Price and Inventory Unit: 10,000 tons, RMB/ton

价格和库存的负向关系时期 单位：万吨、元/吨

Sources: Wind SMM CITIC Futures

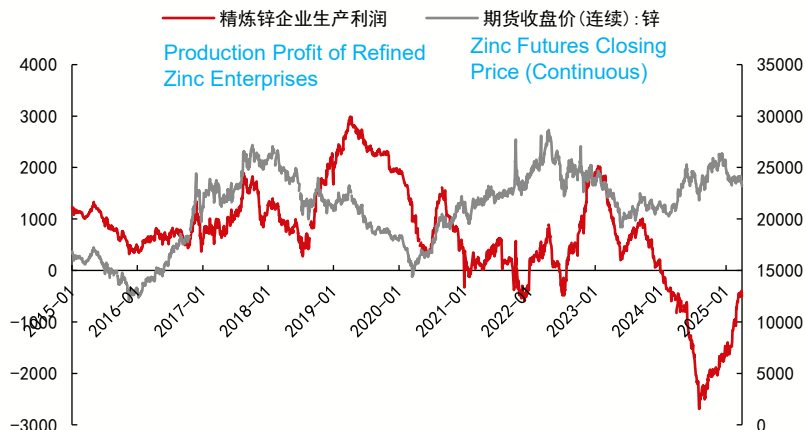

3.2 Cost & Basis

成本和基差

- Cost supports futures prices at the bottom: when futures prices approach costs, markets expect zinc smelters to cut output, and zinc prices may bottom out.
- Basis affects the long-short safety margin of futures positions: basis, the gap between spot and futures prices, tends to converge as maturity nears. A high basis means futures are significantly lower than spot, providing a larger safety margin for long positions; a low basis (spot and futures roughly flat) gives a larger safety margin for short positions if bearish on forward demand.
- 成本对期货价格具有底部支撑作用：当期货价格靠近成本时，市场预期锌冶炼厂将减产，锌价或将见底。
- 基差影响期货多空安全边际：基差，即现货和期货价格之差，一般随着到期日临近趋向收敛。高基差表明期货大幅低于现货价格，做多期货拥有更多安全边际；低基差则表明期现价基本持平，若看空远期需求，则做空期货拥有更多安全边际。

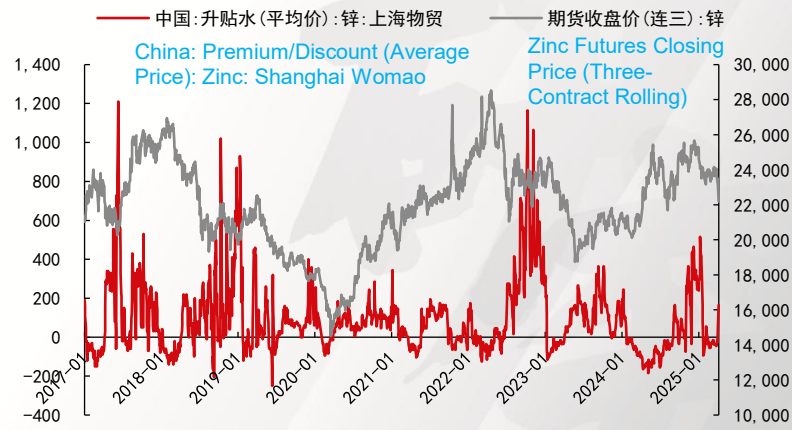

Cost Support Unit: CNY/ton, CNY/ton

成本支撑 单位：元/吨、元/吨

Basis and Price Unit: CNY/ton
