the US Dollar Index

# 1980 – 1994: 泡沫与干预 Bubble and Intervention

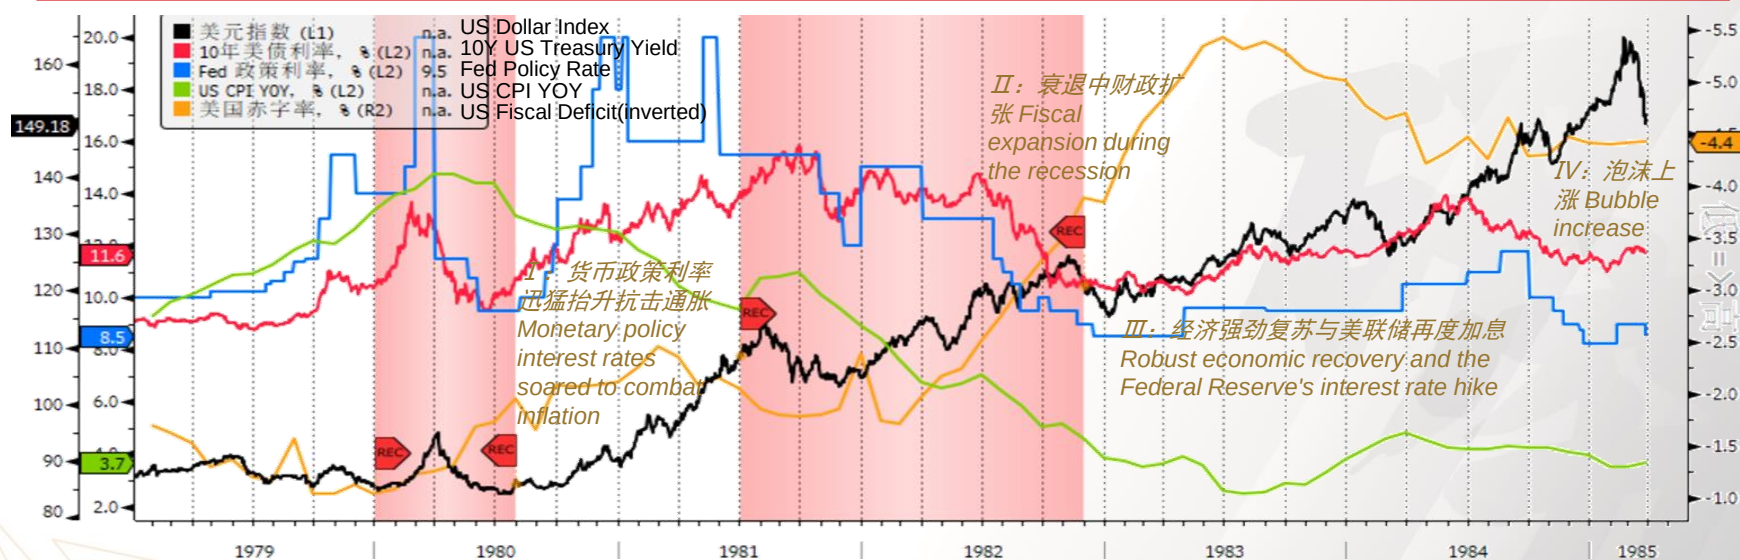

01

## 1980年7月-1985年2月，美元持续升值

### From July 1980 to February 1985, the US dollar continued to appreciate

- 持续升值包括四个阶段的不同背景，分别是：货币政策利率迅猛抬升抗击通胀、衰退中财政扩张、经济强劲复苏与美联储再度加息、泡沫上涨四个阶段。The continuous appreciation includes four stages with different backgrounds, namely: the sharp increase in monetary policy interest rates to combat inflation, fiscal expansion during the recession, robust economic recovery and the Federal Reserve's interest rate hike, and bubble increase.

#### 1980s美元指数走强的阶段与因素 Stages and factors of US dollar index strength in the 1980s

## 1980年7月-1985年2月，美元持续升值

### From July 1980 to February 1985, the US dollar continued to appreciate

- 美国经济增长自1983年走出衰退后，迅速修复，1983Q1 – 1984Q2，GDP环比折年增速平均达7.8%。After the US economy emerged from the recession in 1983, it recovered rapidly. From Q1 1983 to Q2 1984, the average QoQ annualized GDP growth rate was 7.8%

美国经济增长自1983年走出衰退后迅速修复 After the US economy emerged from the recession in 1983, it recovered rapidly

Source: Bloomberg, CITIC Futures

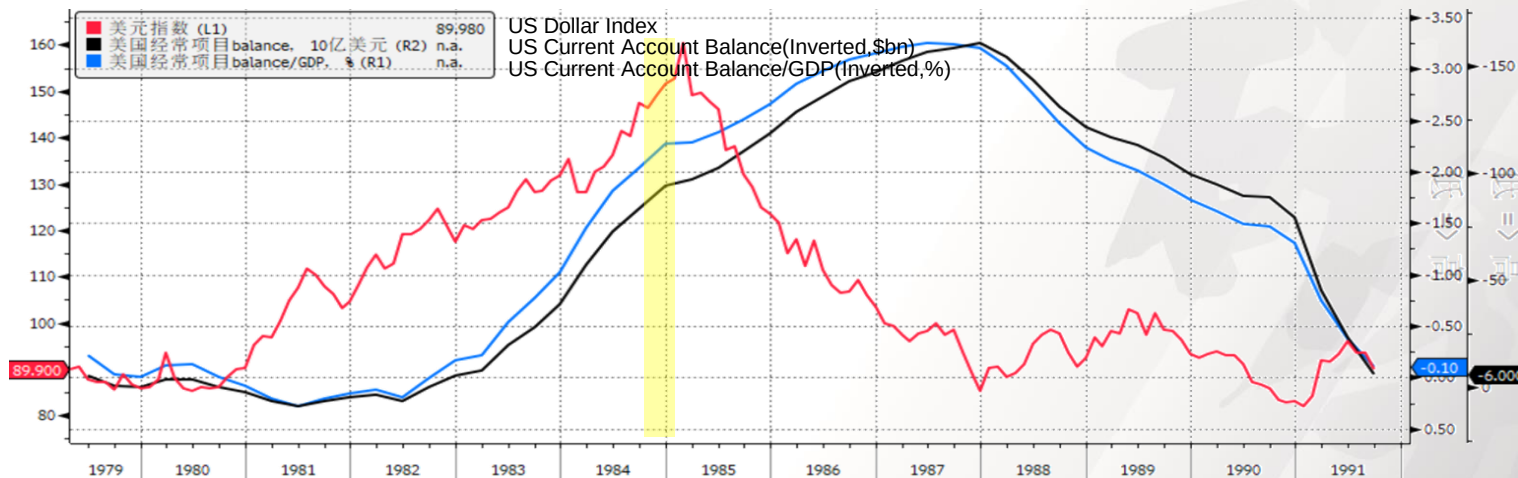

## 自1985年3月，美元持续贬值至1990s初

## Since March 1985, the US dollar continued to depreciate until the early 1990s

- 一方面，1985年里根总统第二任期开始，新财长Baker上任，1月确认听证会显示汇率政策转变迹象。随后德国2月实际干预，美元投资盘松动，美元指数下跌，9月22日G5达成“广场协议”。Firstly, Reagan's second term began in 1985, new Treasury Secretary Baker took office, and the Jan. confirmation hearing showed signs of FX policy shift. Subsequently, Germany intervened in Feb. the US dollar investment position loosened and fell. Later, the G5 reached the "Plaza Accord" on September 22.

**造成汇率政策转变的原因：1984年末，美国经常项目贸易逆差扩大至1000亿美元、美元指数持续背离经济基本面上涨**

**The reasons for the shift in exchange rate policy: At the end of 1984, the US current account trade deficit widened to 100 billion US dollars, and the US dollar index continued to rise against the economic fundamentals**

## 自1985年3月，美元持续贬值至1990s初

## Since March 1985, the US dollar continued to depreciate until the early 1990s

- 另一方面是，美联储在国内通胀自1984年年末延续回落至1986年期间，货币政策利率亦跟随持续下调，美国财政赤字率自1986年年末亦开始收缩，共同促使美元指数持续回落。Secondly, as domestic inflation in the US continued to decline from the end of 1984 to 1986, the monetary policy interest rates followed a continuous downward trend. The US fiscal deficit ratio also began to contract at the end of 1986. These factors jointly contributed to the continuous decline of USD.

### 美元持续下跌亦是宏观政策的结果 The continuous decline of the US dollar is also the result of macro policies

Source: Bloomberg, CITIC Futures

此后，美元随美德利差波动

## Later, USD fluctuated with US - Germany interest rate spread

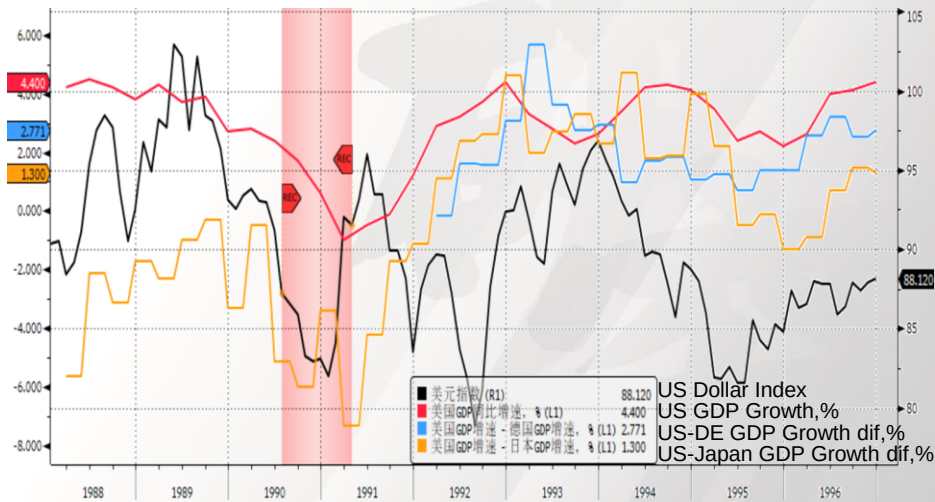

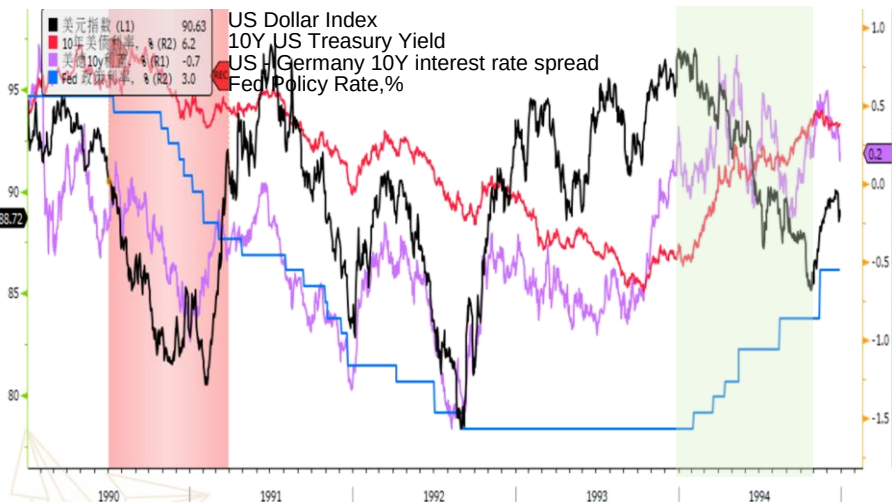

- 1989年末美国经济放缓陷入1990年衰退，非美经济活跃，美元下跌；1992年美国经济复苏时国外经济疲软，美元温和升值。US economy slowed and fell into 1990 recession, non-US economies are more active, USD down; 1992 US recovery with weak foreign economies, USD up moderately.

美元走势追随美德利差，但1994年美元走势与基本面似乎背离

The dollar trend follows the US - Germany interest rate spread, but in 1994 dollar trend seemed to deviate from the fundamentals

1980年代末期-1990年代初期，美元走势与美、德、日 GDP增速对比

Dollar trend vs. US, Germany, Japan GDP growth rates in the late 1980s - early 1990s

# 1994年美元偏离基本面导致美国再度干预

## While, USD deviation from fundamentals led to US intervention in 1994

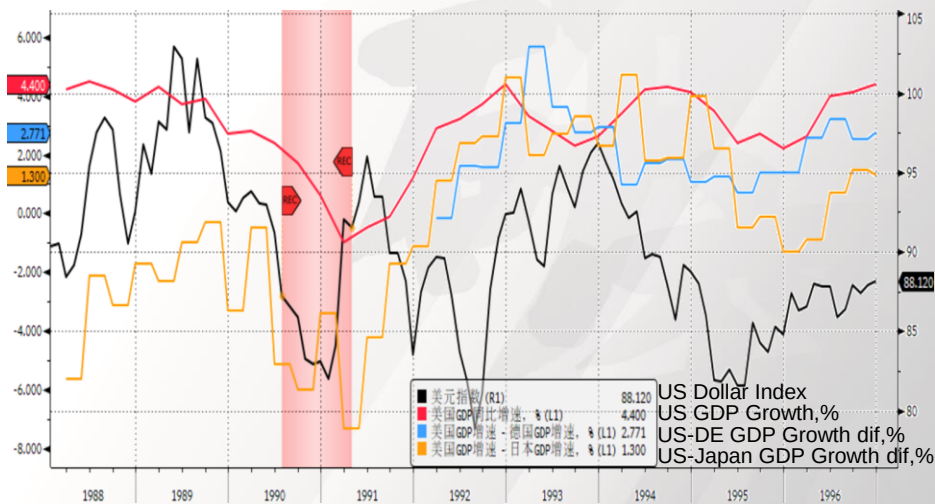

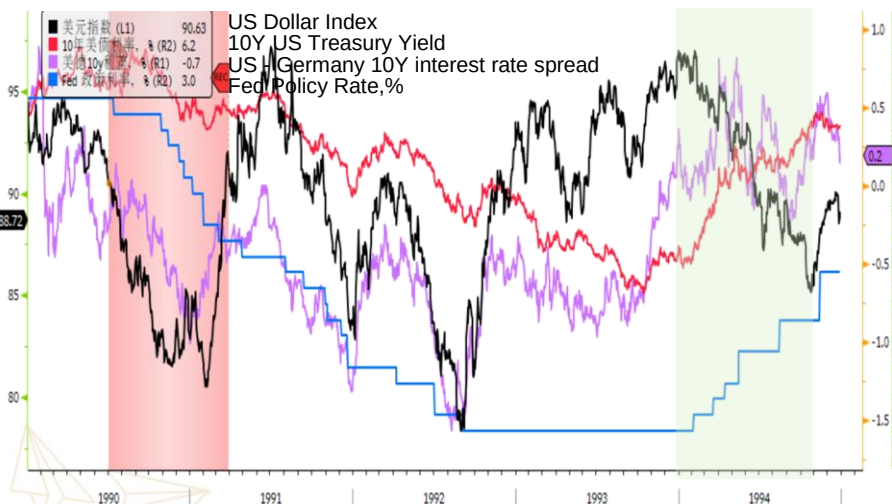

- 1994年美国经济再加速，美联储加息，美德利差上升，但美元下跌。美国财政部倾向强美元，1994年进行了5次干预，分别在4、5、6月以及11月2日/3日买入美元并卖出日元与德国马克，值得注意的是美联储11月15日加息幅度提高至75bp。In 1994, the US economy accelerated again, FED raised interest rates, the US - Germany interest rate spread rose, but USD fell. The US Department of the Treasury preferred a strong dollar. In 1994, it intervened 5 times, buying dollars and selling Japanese yen and German marks on April, May, June, and November 2nd/3rd. It is worth mentioning that on November 15, FED raised the interest rate increase to 75bp.

# 1995 – 2010: 互联网革命与经济力量转换

## Internet Revolution and Transformation of Economic Power

02

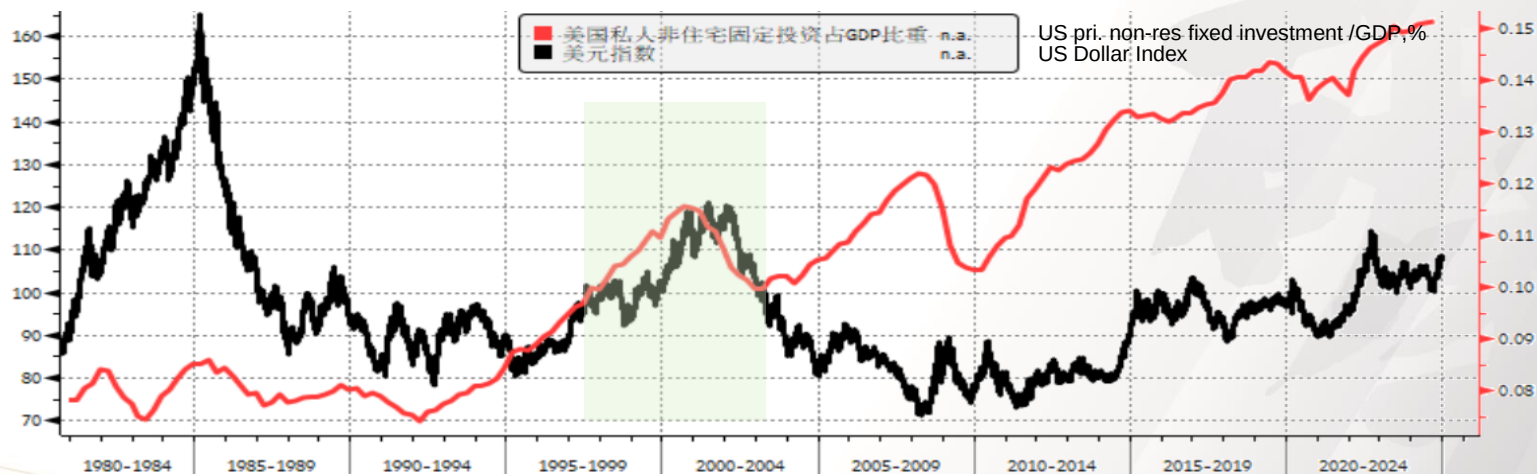

## 1995 – 2010: 互联网革命与经济力量转换

### Internet Revolution and Transformation of Economic Power

- 1995年美元再度开启趋势性升值，既有美国当局强美元政策诉求支撑（美国第70任财长鲁宾亦支持强美元/1995年5月再度干预支持美元）

In 1995, the US dollar once again initiated a trend of appreciation, which was supported by the US authorities' strong - dollar policy (US 70th Secretary of the Treasury Rubin also supported a strong dollar and intervened again in May 1995 to support the dollar).

美国私人非住宅固定投资占GDP比重自1995年突破过去15年8%的中枢持续上行至2000年的11.5% The proportion of US pri. non-residential fixed investment in GDP broke through the 8% average level of the past 15 years in 1995 and continued to rise to 11.5% in 2000

# 1995 – 2010: 互联网革命与经济力量转换

## Internet Revolution and Transformation of Economic Power

- 欧盟的出现以及欧元区经济规模的扩大、欧元在储备货币中的地位抬升以及中国加入WTO之后逐步成为世界第一大制造业出口国并带动中国经济在世界经济中的地位抬升，而美国经济在世界经济中占比呈现加速回落，导致美元趋势性回落。The emergence of the EU, the expansion of the eurozone economy, the rising status of the euro as a reserve currency, and China's gradual rise to become the world's largest manufacturing exporter after joining the WTO, which boosted China's economic status in the world economy, while the US economic share in the world economy showed an accelerated decline, leading to the trend of dollar decline

### 欧盟出现与欧洲的一体化使得欧元在全球货币储备中的占比提升

#### The emergence of the EU and European integration led to an increase in the proportion of the euro in global foreign exchange reserves.

# 2011 – Present: 货币政策的分化 Divergence of Monetary Policy

03

# 2011 – Present: 货币政策的分化

## Divergence of Monetary Policy

- 2011年以来至今，美元指数震荡上行，2014年、2022年两次区间突破分别使得美元指数运行在95、104的更高中枢，直接驱动在于货币政策的分化。Since 2011 to the present, USD has been fluctuating upward. The two range - breakouts in 2014 and 2022 respectively pushed USD to a higher central level of 95 and 104. The direct driving factor is the divergence of monetary policies

### 2010年至今：美元指数与主要央行货币政策利率

# 2011 – Present: 货币政策的分化

## Divergence of Monetary Policy

- 疫情后美元先跌，2022年涨破114.5，因通胀飙升、美联储激进加息及俄乌冲突避险情绪推高美元。后美通胀回落、欧元区通胀续升与欧央行加息，美元回落至104。After the pandemic, the dollar first fell, then rose above 114.5 in 2022, driven by surging inflation, Fed's aggressive rate hikes, and the Russia - Ukraine conflict's safe - haven sentiment boosting the dollar. Later, with US inflation falling, eurozone inflation continuing to rise, and the ECB's rate hikes, the dollar fell back to 104.

**2022年，美元指数再度破位并冲向114.5，随后回落运行在104的中枢**  
**In 2022, USD broke through again and rushed to 114.5, and then fell back to the center level of 104**

## 美元指数的三层分析框架

### Three - tier Analytical Framework for the US Dollar Index

- 具体来说，第一层为美元指数的基础，主要考虑的因素包括：美元在国际储备货币中占据绝对优势的地位、美国政府债务信用、美国的国际收支情况以及政府的汇率主张与干预行为，第一层分析框架对于美元指数具有决定意义，但可能难以预测以及中短期难以发生实质性变化进而影响美元走向。In detail, the first layer is the foundation of the US Dollar Index, mainly considering factors such as the US dollar's dominant position in international reserve currencies, US government debt credit, the US international balance of payments, and the government's exchange rate claims and intervention actions. The first - layer analytical framework is decisive for the US Dollar Index, but it may be difficult to predict and may not undergo substantial changes in the medium - short term to affect the direction of the US dollar.

Source: Bloomberg, CITIC Futures

**中信期货**  
CITIC Futures

This report is not a service under the futures trading consulting business. The opinions and information provided are for reference only and do not constitute investment advice to anyone. CITIC Futures do not consider relevant personnel as client due to their attention, receipt, or reading of the content of this report.

- 第二层与第三层按照是否处于衰退或危机阶段进行划分，如果处于衰退或危机阶段，对流动性的追求以及风险规避的情绪将导致美元指数走强。如果处于非危机阶段，美元指数的走向取决于美国与非美经济体的比较，主要聚焦于预期投资回报率的边际变化，落在宏观变量上即GDP增速或利率边际变化。进一步从政策端入手把握宏观变量的边际变化，需要关注货币政策、财政政策与结构政策（eg.监管）的变化，因为政策将引发宏观变量的边际变化。更进一步的观测变量包括通胀、投资/生产率、新科技产业等，由于全球多数央行的目标均包括通胀甚至把通胀作为唯一政策目标，通胀的边际变化作为汇率走向的重要观测变量，此外投资/生产率以及新的科技产业作为推动经济增长的重要引擎亦是观测汇率走向的重要观测变量。The second and third layers are divided according to whether it is in a recession or crisis stage. If it is in a recession or crisis stage, the pursuit of liquidity and the sentiment of risk - aversion will lead to the strengthening of the US Dollar Index. If it is in a non - crisis stage, the direction of the US Dollar Index depends on the comparison between the US and non - US economies, mainly focusing on the marginal changes in the expected rate of return on investment. In terms of macro - variables, it is the marginal changes in GDP growth rate or interest rate. To further grasp the marginal changes in macro - variables from the policy side, it is necessary to pay attention to the changes in monetary policy, fiscal policy, and structural policies (e.g., regulation), because policies will cause marginal changes in macro - variables. Further observed variables include inflation, investment/productivity, and new technology industries. Since the target of most central banks around the world includes inflation and even regards inflation as the only policy target, the marginal changes in inflation are an important observed variable for the direction of exchange rates. In addition, investment/productivity and new technology industries, as important drivers of economic growth, are also important observed variables for the direction of exchange rates.
