Summary

总结

- PB Fines most active contract basis values mostly fall within the range of [0, 200] yuan/ton.
 - The basis is highest when a new contract is first listed and gradually narrows to around zero as the delivery month approaches.
 - There is an expectation for the basis to strengthen in September, a peak season. Conversely, the basis tends to decline, typically at a faster pace during the off-season and invariably as the delivery month approaches.
 - In the delivery month, the basis for the September and January contracts is slightly higher than that of the May contract.
 - When price spreads between different ore grades widen, the basis may deviate quickly from normal ranges. Risk control is essential.
-
- PB粉矿主力合约基差多数落在[0, 200]元/吨区间。
 - 新合约上市初期基差处于高位，随着交割月临近逐渐收敛至零值附近。
 - 9月旺季存在基差走强预期，而淡季期间基差往往加速回落，临近交割月时则必然收敛。
 - 在交割月内，9月与1月合约基差水平略高于5月合约。
 - 当不同矿石品位价差扩大时，基差可能快速脱离正常区间，需注意加强风险控制。

Risks: Basis Fluctuation, Operational Risk, Policy Changes, Economic Fluctuations, etc. **风险提示:** 基差波动、操作风险、政策变化、经济波动等

2.1 Basis-related Concepts

基差相关概念

✓ $\text{Basis} = \text{Adjusted Spot Futures Equivalent Price} - \text{Futures Price}$; $\text{Spread} = \text{Spot Price} - \text{Futures Price}$.

✓ The divergence in spot-futures price movements arises from: (1) different pricing benchmarks—quality variation, regional differences, trade and other fees, and transmission lags; (2) futures prices reflect both spot fundamentals and market expectations.

✓ In this report, **spot price** is defined as the **lowest tax-included PB FINES price across all ports**; **futures price** is the DCE iron ore main contract closing price for **January, May, and September**.

✓ If the delivery system is well-designed, futures and spot should converge at delivery, with basis near zero. However, multiple deliverable brands with varying quality cause basis to reflect both spot-futures spread and the price premium/discount between the spot brand and the lowest-cost deliverable.

✓ During 2020–2021, a surge in export demand and domestic crude steel cuts led mills to favor high-grade ore, pushing inter-product spreads to record highs. The PB FINES basis in that period includes these product spreads and far exceeds other years. We exclude 2021 data in our analysis to illustrate the normal seasonal pattern of basis.

2.1 Basis-related Concepts

基差相关概念

✓ 基差 = 现货折盘面价格 - 期货价格；价差 = 现货价格 - 期货价格。

✓ 现货与期货价格走势出现分化的原因在于：(1) 定价基准不同——品质差异、地区差价、贸易及其他杂费、传导时滞；(2) 期货价格既反映现货基本面，也包含市场预期。

✓ 本报告中，现货价格定义为所有港口PB粉矿含税最低价；期货价格取大连商品交易所铁矿石主力合约1月、5月、9月的收盘价。

✓ 若交割制度设计完善，期货与现货应在交割时趋同，基差趋于零。然而多品牌交割制度下，各品牌品质差异导致基差同时反映现货和期货价差及现货品牌与最低价可交割品之间的价差。

✓ 2020-2021年间，出口需求激增与国内粗钢限产促使钢厂多使用高品位矿，推动品种价差创历史新高。该时期PB粉矿基差包含品种价差，远高于其他年份。为展示基差的正常季节性规律，我们在分析中剔除了2021年数据。

2.1.3 PB Fines January Contract Basis

PB粉01合约基差

- PB Fines – January Contract Basis (Yuan/ton): Max: 518.9 ; Min: -28.9 ; Avg: 89.7 ; 80% Range: [2.9, 188.1]
- In September, typically a peak season for the industry, the basis slightly widened. In the off-season months of November and December, the basis tended to contract more rapidly.
- 九月通常是行业旺季，基差小幅走阔；而在十一、十二月淡季期间，基差收窄速度往往加快。

2.2.3 PB Fines May Contract Basis

PB粉05合约基差

- PB Fines – May Contract Basis (Yuan/ton):
Max: 619.1 ; Min: -57.5 ; Avg: 85.5 ; 80% Range: [-1.8, 204.7]
- In April, ahead of the delivery month and seasonal transition, the basis narrowed rapidly. In September, the basis strengthened due to the traditional peak season. October did not show strong performance, but the month-on-month decline was limited.
四月临近交割月及淡旺季转换，基差快速收窄；九月虽然是传统旺季，基差却逆势走强；十月表现不突出，但环比降幅有限。

2.3.3 PB Fines September Contract Basis

PB粉09合约基差

- PB Fines – September Contract Basis (Yuan/ton):
Max: 398.1 ; Min: -28.1 ; Avg: 80.1 ; 80% Range: [2.1, 201.7]
- In July, a typical off-season and close to delivery month, the basis declined rapidly. In January, the basis for the September contract was relatively strong, unlike the January and May contracts. This may be due to the longer time to delivery, during which market expectations of increased supply for later months led to relative weakness in the September futures price.

七月作为传统淡季且临近交割月，基差快速回落；09合约在1月份表现相对坚挺，这与01、05合约有所不同，可能是由于距离交割时间更长，期间市场对后续月份供应增加的预期导致09合约价格相对偏弱。

Conclusion

总结

03

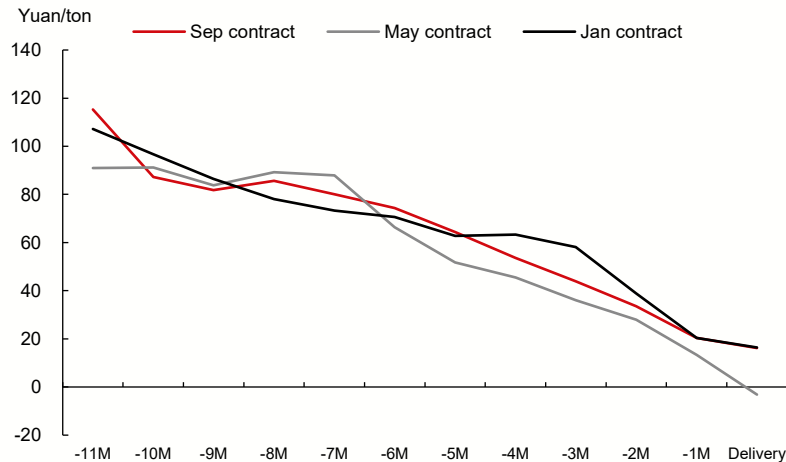

3.1 Normalization

标准化处理

- After standardizing the monthly average basis data of the three major contracts by delivery month, we observe that the **basis is highest when the contract is newly listed and gradually narrows to around zero as it approaches delivery**. This is because iron ore futures typically exhibit a **long-term backwardation structure, with distant-month contracts trading at a discount**.
- Since **downstream steel demand peaks in March–April and September–October**, and steel mills tend to **replenish inventories before the Chinese New Year**, the **September and January contracts show stronger spot demand**. As a result, their basis remains above zero at delivery. In contrast, the **May contract**, which falls between the peak and off-season, sees weaker demand and softer spot prices, **leading to a lower basis at delivery** compared with the other two major contracts.

3.1 Normalization

标准化处理

- 对三个主力合约的月均基差数据按交割月份进行标准化处理后，我们发现：合约在新上市时基差处于最高水平，随着交割临近逐渐收敛至零值附近。这是因为铁矿石期货通常呈现长期贴水结构，远月合约价格低于近月合约。
- 由于下游建筑钢材需求在3-4月与9-10月相对较高，且钢厂往往在春节前进行补库，09与01合约对应的现货需求表现相对强劲，因此进入交割时基差仍能维持正值。而5月合约处于旺季向淡季过渡阶段，需求支撑减弱导致现货价格相对疲软，使其交割时的基差水平低于另外两大主力合约。
