慢牛行情

我们预计，继2025年估值扩张推动下上涨20%-30%之后，2026年MSCI中国指数和沪深300指数将分别上涨20%和12%。我们在亚洲市场中维持高配A股和港股的投资建议。

股市上涨需以盈利改善为前提

我们预计2026年的股市涨幅将几乎完全由盈利驱动：在AI、“出海”和“反内卷”政策的支持下，企业盈利增速将从2025年的4%加速至2026年和2027年的14%。当前MSCI中国指数和沪深300指数12.4倍和14.5倍的估值倍数处于周期中期水平，相对于高盛宏观预测较为公允，但AI货币化、政策刺激和超额流动性带来的右尾风险仍未被充分定价。

追随资金流向

1) 我们预测，南向资金净买盘有望达到2,000亿美元，再创历史新高；2) 国内资产再配置的资金流可能加速，或为股市带来人民币3万亿元（4,200亿美元）的资金；3) 今年股息和回购总额可能接近人民币4万亿元（5,700亿美元）；4) 全球多头投资者可能收窄对中国股票的低配幅度（目前低配310个基点），有望带来100亿美元买盘；5) 今年IPO募资总额可能超过1,000亿美元（同比增长80%），相当于当前市值的0.5%。

2026年的市场投资之道

随着2026年开启，我们在板块方面继续看好AI题材（上调硬件板块至高配，与互联网板块一致），在消费领域仍然更青睐服务而非商品，在周期性板块中关注材料板块，并在高收益组合中维持对保险板块的高配建议。主要投资题材包括：受益于AI和民企扶持政策的“民企十杰”、受益于出口持续强劲的“出海领军者”、基于政策倾向而战略性配置于中盘股的“高盛十五五规划投资组合”，以及提供具吸引力的现金收益率和分散化价值的“股东回报投资组合”。

Key Market and Investment Themes for 2026

From PE-led to Profit-driven Returns

Trend EPS Growth at low-teen levels

Major Thematic ideas

Performance of Top China Themes since 2024

Source: Goldman Sachs Global Investment Research

Macro: Exports bearing fruit; consumption needs more help

- GS China economists recently raised their real GDP growth forecast from 4.3% to 4.8% for 2026, and from 4.0% to 4.7% for 2027, meaningfully above sell-side consensus of around 4.5% for both years, underpinned by the strength and resiliency of Chinese exports. They have also upgraded their medium-term growth forecasts, projecting GDP growth to settle at 4% by 2030, equivalent to a 4.5% CAGR in the remainder of this decade, largely in-line with policymakers' target of doubling 2020 per capita income by 2035.
- Nominal growth will still likely be hamstrung by low absolute inflation this year—0.6% CPI and -0.7% PPI inflation for 2026 on GS forecast—reflecting soft domestic demand, elevated supply (stock), and likely subdued energy prices globally—although PPI is expected by our economists to return to positive territory in 2H26 after staying in a negative zone for the past 38 months on low-base effects and anti-involution efforts.
- Exports growth may rise 5.6% in 2026 in nominal USD terms despite possible trade frictions from China's trading partners, with the full-year trade surplus potentially topping 4% of GDP by end-26. The key anchors to China's manufacturing/export bet include a competitive currency, reduced uncertainty on US tariffs, diversified export destination, China's dominance in several critical minerals, and improving value proposition and quality of Chinese exports.
- Housing sales could fall 8% in value and 6% in volume terms, extending the downcycle to 64% (by value) since its all-time highs in 2021, from which land sales and new starts have also plunged more than 70%. We expect the sector will remain a negative contributor to growth (~0.5%), but the drags are moderating alongside the shrinking representation of the housing sector in the economy (~18% now vs 27% in 2021).
- Headline FAI growth could recover to 2% in 2026, after contracting 3% yoy in 2025, the first negative print since 1992. Investments in public welfare and New Infra projects, including AI-related capex, could strengthen in 2026 on better government funding support, but those in areas where oversupply concerns are pronounced, housing included, could remain sluggish.
- Household consumption growth could stabilize at around 4.5% this year, on the back of: a) extension of targeted fiscal spending and subsidy in consumption-focused areas; b) further closing of output gaps in the service-oriented sectors; c) emergence of “New” consumption categories; and, d) positive wealth effects on higher financial asset prices. Over the long run, structural reforms centering on Hukuo and pension system liberalization, social safety net enhancements, and other initiatives to help support the weak labor market and rebalance the economy (from exports to domestic demand) may be required to unleash the consumption potential.

Policy: Pro-market policy window stays open in the maiden year of the 15th Five-Year Plan (FYP)

GS policy expectations for 2026

- Monetary: Further easing in monetary conditions helped by moderate RRR and rates cuts (including mortgages), although the Rmb could see appreciation pressures vs. the Dollar (GSe: USDCNY to 6.85 by end-26).
- Fiscal: Deficit spending missed our economists' forecast in 2025, but will likely recover this year (GSe: augmented fiscal deficits rising from 11% in 2025 to 12.2% in 2026) to facilitate property destocking, infrastructure and social investments, and consumption stimulus programs.
- POE Regulation: Our proprietary POE Regulation Proxy reaffirms our belief that the regulatory stance towards the private-economy (and private-owned enterprises) should remain supportive going into 2026.
- Equities: Given the rising strategic importance of the stock market to the country in terms of allocating resources, funding new productive growth drivers and innovation, creating wealth for Chinese households, and counteracting external pressures, we believe the pro-equity policy stance will remain and a policy-engineered equity downturn is unlikely unless there is clearer evidence of valuation excess and rampant speculation emerges. Besides the lending facility from the PBoC for local institutions to take equity risk, direct stock purchases from the National Team, and easier access to the IPO market for strategically-important companies, we expect the majority of new policy and regulation changes to be largely consistent with the key objectives outlined in the Nine Measures document, which emphasizes unlocking value in corporate balance sheets, attracting anchored and patient capital to the stock market, and improving corporate governance and returns for/of shareholders via dividends and buybacks.
- China's 15th FYP: Based on the approved 15th FYP proposal, our economists see technology, security, and people's livelihood as top priorities for China's development strategy over 2026-30. Historically, Chinese policymakers were able to accomplish nearly 90% of their proposed numerical growth and development targets in the FYPs, and our research shows that following the 5-Year Plans can be rewarding in the stock market (see Key Themes section for details).

图表 11: We believe the pro-market policy stance across the key cohorts since 4Q24 will remain valid in the foreseeable future

	Monetary	Fiscal	Property	Equity Market	Regulation
2024Q4	PBOC pledged to implement more proactive policy easing at its Q4 MPC meeting	State council issued a note on optimising the mechanism for local government special bonds	MOF: reduced deed tax rate for housing transactions to 1% for homes up to 140 sqm (90 sqm previously)	NDRC, CSRC: guide medium and long-term funds and insurance funds into the market and support M&A and restructuring of listed companies	Ministry of Justice and NDRC: studied and drafted the "Private Economy Promotion Law" to further optimize the development environment for the private economy
		CEWC reiterated pro-growth stance, and focused more on boosting domestic demand and consumption .	MOHURD: "Whitelist" project for bank lending and expand the scale to Rmb 4tn by end-2024 (Rmb 2.2tn at Oct 2024)		State Council unveiled a "special action plan" to boost consumption. CEWC reiterated pro-growth stance, and focused more on boosting domestic demand and consumption
2025Q1	Two Session: Implement a moderately accommodative monetary policy and maintain abundant liquidity	Two Session: fiscal deficit target of 4% of GDP, and planned 1.3 trillion yuan worth of ultra-long term special treasury bonds in 2025	Two Session: City-specific policies will be adopted to reduce restrictive measures, and unleash both essential and upgrade-related housing demand.	Four large SOE banks (i.e., CCB, BOC, BoCom and PSBC) announced detailed capital injection plans totaling RMB 520bn	President Xi urged efforts to promote the healthy and high-quality development of the private sector during his meeting with representatives of private entrepreneurs
		State council: local government special-purpose bonds of 4.4 tn yuan (investment, land reserves and acquisition, and resolving overdue payments)		The Central Financial commission issued a note on promoting the entry of medium- and long-term funds into the market	Two Session: boost consumption , expand domestic demand , develop new quality productive forces, and advance the construction of a unified national market
2025Q2	50bp RRR cut (providing ~Rmb1tn liquidity). Cut seven-day reverse repo rate to 1.4% from 1.5% , cut 1-year and 5-year LPR by 10 bps	NDRC stated that the third batch of funds for the consumer goods trade-in program will be allocated in July	Lower Individual Housing Accumulation Fund Loan rate (five-year and above loans) by 0.25 pp , from 2.85% to 2.6%	CSRC: Amended the measures to deepen market-oriented M&A and restructuring Reform	China adopted the country's first fundamental law dedicated to promoting the private sector to optimize the development environment for the private economy
	PBOC conducted an RMB1tn 3-month outright reverse repo to maintain stable liquidity conditions in the banking system	NDRC pledged more measures to support employment , keep foreign trade stable, promote consumption, and expand investment	State Council: constructed a new real estate development model and advancing the "quality housing initiative"	CSRC: Combined the 500 billion yuan swap facility and 300 billion yuan stock repurchase refinancing tool into an 800 billion yuan facility	
2025Q3	PBOC maintained an easing bias at its Q3 MPC meeting	NDRC launched a nationwide childcare subsidy program (RMB 3600 per year for each child until they turn three years old)	Shanghai has further relaxed local home purchase restrictions , removing the cap on the number of properties eligible residents can buy outside the Outer Ring Road	CSRC: Continued to fully leverage the exemplary effect of the STAR Market , and step up efforts to launch the " 1+6 " policy measures for further deepening reforms.	The Central Commission for Economic and Financial Affairs meeting called for reducing local protectionism and combating excessive competition and price-cutting
	PBOC held a joint press conference with major financial regulators and signaled a data-dependent approach	NDRC has allocated the third-batch of this year's 69 billion yuan ultra-long-term special treasury bonds			State Council has officially issued the Opinions on Deeply Implementing the ' AI+ ' Action
2025Q4	PBOC maintained an easing bias at its Q4 MPC meeting, increasing counter-cyclical and cross-cyclical adjustments	NDRC allocated RMB 200 billion of the RMB 500 billion local government bond quota to LGSB	Ministry of Finance issued a notice to allocate a portion of the 2026 budget in advance, specifically for central government subsidy funds supporting urban affordable housing projects	NFRA: Eased risk factors for insurers, bolstering long-term equity investments	The Central Economic Work Conference suggests modestly pro-growth policy stance, while the December Politburo meeting suggests a lack of urgency for policy stimulus
		NDRC clarified that a new type of policy-based financial instrument totaling 500 billion yuan will be used to support technological innovation, expand consumption, and stabilize foreign trade.			The 15th Five-Year Plan proposal highlighted policy priorities including technology, manufacturing, security, and people's livelihood
2025	Policy Rate: 1.4% RRR: 6.2%	AFD (Augmented Fiscal Deficit, GSe): 11.0% (GDP)	Property Sales: RMB 8.4 tn (GSe, -13% yoy) Property FAI: RMB 8.5 tn (GSe, -15% yoy) Housing contribution to yoy GDP growth (GSe): -1.9%	H-share IPO Volume: US\$ 36 bn H-share IPO Application: 300+	POE Regulation Proxy: -0.6 Policy Risk Barometer: -0.8 (Based on 5y z-score, a more negative value represents a more easing policy stance)
26 GSe	Policy Rate: 1.2% RRR: 5.8%	AFD: 12.2%	Housing contribution to yoy GDP growth: -1.6%	Total Shareholder Returns: RMB 3.8 tn

Earnings: Back on track, and on trend

- We forecast 14% profit growth for MSCI China and CSI300 in 2026, up from 4% and 8% respectively in 2025, largely in-line with sell-side consensus estimates. This implies a meaningful profit growth acceleration this year helped by a low base in 2025 and the growth impulses from three idiosyncratic drivers—AI, Going Global, and anti-involution—that could propel medium-term EPS growth to low-teen levels on our projection.
- Top-line growth in 2025 was hampered by low inflation, growing merely +5% yoy, the 6th slowest in the past 2 decades. We expect revenue to grow 9% in 2026, above GS nominal GDP growth forecast. Aggregate net margin/ROE could rebound somewhat (to 11.5%, +0.1 s.d. since 2010), helped by narrowing losses in the food delivery sector, improving PPI, and a modestly better pricing environment across sectors due to the anti-involution policy push.
- By economic themes, exports and AI Tech will likely be key contributors to market profits given higher overseas margins, policy support, and AI-related demand and investments. Rmb appreciation potential (vs. the USD) could boost HKD/USD-denominated earnings, while the earnings drags from the ailing housing market could further moderate amid normalizing losses.
- Accommodative policy is an anchor to our constructive earnings view. In particular, fiscal stimulus is necessary to instill growth impetus, and every Rmb1tn worth of deficit spending (~0.7% of GDP) could boost next year's EPS growth by 2pp on our top-down estimate.
- Sectorally, we expect the TMT sector's earnings (Internet and Hardware) to grow by around 20% next year on likely AI monetization progress and AI capex. Autos are forecasted by sell-side analysts to double profits in 2026 from a low base in 2025 but the visibility seems low.
- On the more concerning side, traditional consumption subsectors in F&B and Durables will continue to face pricing pressures but those that are exposed to the service economy and “New” consumption look well-placed to benefit from policy focus on demand-side measures and changing consumer preferences.

图表 12: AI, anti-involution, and “Going Global” could lift index EPS growth to low-teen levels in the next few years

Valuations: Fair, but right tail looks attractively priced

- Valuation normalization of Chinese stocks is probably coming to the tail end. Following the 46% and 37% PE re-rating since their cycle lows in late 2022, MSCI China and CSI300 are trading on 12.4x and 14.5x 12m P/E, around 0.4 s.d. and 1.5 s.d. above 10-year means, essentially at or moderately above their mid-cycle levels.
- But, MSCI China is currently priced at 38% and 11% discounts to DM and EM ex-China equities despite a similar, if not better, earnings growth profile for 2026. This suggests to us that the perceived ERP remains elevated for China equity perhaps due to various macro, policy, and geopolitical overhangs. ERP indeed appears high on a cross-asset basis, especially vis-a-vis domestic 10-year government bonds that are yielding 1.8% at the moment and negative carry in the housing market given depressed rental yields.
- Our end-2026 target fP/E for MSCI China and CSI300 is 13x and 15x respectively, framed by the following valuation methodologies:
 - a. Our macro PE model indicates that MSCI China should trade at 13x fP/E and around 15x for CSI300 by end-2026, suggesting that prevailing multiples are fair relative to GS macro forecasts. This also means that the right-tail optionality revolving around AI monetization, (more aggressive) fiscal stimulus, and liquidity/risk appetite upsurge in A shares is inexpensively priced in current valuations.
 - b. Plugging our normalized ROE (12%) and trend EPS growth (8%) assumptions into our DDM-based framework, we estimate that the theoretical, intrinsic-value-derived P/E for MSCI China would be at around 13.7x;
 - c. Forecasting the fair ERP on an ex-ante basis using long-term growth and geopolitical risk factors, we note that A shares are probably undervalued by 5% whereas the offshore market is close to its equilibrium.

图表 19: Our top-down macro model suggests that China equities should trade at an equilibrium fP/E of around 13x

Equity supply/demand: Following where money goes

1. Connect flows: We forecast Southbound flows to make another record high of US\$200bn in 2026 after reaching US\$180bn in 2025, the highest ever, underpinned by: a) further expansion of the Southbound universe on new IPOs and dual-primary listing inclusions; b) still-high AH premiums (at 37% now); and, c) attractive dividend yields for onshore investors (5.7% for Hang Seng China High DY Index). Northbound liquidity could reverse the outflow trend in 2025 (-US\$24bn in the first 3 quarters of 2025) and register US\$20bn inflows in 2026 on potential demand for physical AI proxies and likely Rmb strength.
2. Hedge funds: HF net exposures to China, per GS Prime Brokerage statistics, rose from 8th percentile from end-24 to 32th percentile now relative to the 5-year averages. Their current net/gross allocations of 7.6%/6.5% to Chinese equities are still significantly below previous cycle peaks of around 11%-13% and could further rise around the themes of AI, New Consumption, Going Global, and anti-involution beneficiaries.
3. Global long-only investors: Around US\$1.6tn of mutual fund assets globally (ex ETFs) are underweight China equity by 310bps on an AUM-weighted basis. EM and AEJ funds have noticeably narrowed their UW gaps in the past year, but global-focused mandates have stayed largely on the sideline. Their growing demand for diversification (away from US assets) and other China idiosyncratic factors may motivate LO managers to further reduce tracking errors in their China portfolios. We estimate that every 100bps off-benchmark tilt in this universe could lead to around US\$16bn of buying/selling of Chinese stocks, ceteris paribus.
4. Onshore individual investors: Chinese individual investors conceptually are far away from their optimal efficient frontier, with property/cash accounting for 54%/28% of their asset base, vs. 11% in equities. Falling real interest rates and high(er) expected returns on equities (i.e. elevated ERP) could drive trillions of dollars from cash to equities. Continuing (disposable) income and financial capital growth also implies that more than Rmb14tn of “new money” will look for a home to be deployed every year.
5. Onshore institutional investors: Financial asset institutionalization is also gaining momentum. Long-duration asset managers, such as insurance and pension funds, are eager for stable incomes from high-yielding equities, and regulatory push and corporate/market reforms are added policy tailwinds. Institutional investors currently own 14% of onshore listed market cap, substantially lower than the averages in DM (59%) and EM (50%), from which would imply Rmb30tn and Rmb14tn of institutional capital inflows to the stock market over time.
6. The National Team: We estimate the loosely-defined National Team had around Rmb6tn exposures to China equity as of 3Q25, 6% of A-share market cap. These State-sponsored entities have been active during periods when selling pressures have been pronounced and will likely remain a stabilizer in the stock market.

7. Corporates: Buybacks rose to US\$9bn in 3Q25 across A- and H- shares, on pace for reaching US\$50bn for the full year, an annual record high. We project total buybacks to increase 20% given policy push (Rmb800bn relending quota from the PBoC), solid operating cashflows, better capex discipline and still-elevated cost of equity.
8. New supply: The HK/China IPO market saw a strong rebound in 2025 after 3 subdued years of fund-raising activity. Specifically, 117 companies made their debuts on HKEx in 2025, raising HK\$286bn (+224% yoy, rank #1 globally), and with almost 300 applications waiting in the pipeline. On average, these new listings have generated 39% 1-week and 38% 1-month returns post their listings. Empirically, capital raising activity is directionally correlated with performance and turnover in the secondary market, possibly reflecting the “money-making” effects from new listings, positive read-across for growth capex, and supportive policy signals towards the stock market. Top-down, we forecast a total new issuance size of US\$100bn across A and H shares in 2026, on par with the long-term average issuance-to-market-cap ratio of 0.5%.

Market views: Staying Overweight both China A and H shares

- We expect MSCI China and CSI300 to appreciate 20% and 12% in 2026. The intersection of low-to-mid teen trend EPS growth, mid-range but undemanding valuations, and generally low investor positioning points to a favorable risk/reward for China equity, underpinning our continued Overweight stance on both China A- and H-shares in a regional context.
- Our A-H market rotation framework suggests a balanced 3m relative return outlook for the two markets. This is consistent with our long-held view that A vs. H isn't a binary investment decision as the two markets offer unique value propositions to investors domestically and abroad.
- The path of full-year return, on latest GS macro forecasts and key events calendar, points to a potential front-loaded returns profile where US growth (3%/2% in 1H/2H), Fed policy (25bps cut each in March and June), China growth (acceleration in 1Q26), tariff uncertainty (US-China trade truce to expire in late-26), and China policy timetable (Two Sessions in March) all appear pro-market and conducive to sentiment/liquidity in 1H26

Key themes for 2026: Aligning portfolio with Chinese policies

图表 38: Policy (support) and AI are the two common denominators that cut across all our preferred themes for 2026 and beyond

资料来源: FactSet, 高盛全球投资研究部

- Chinese Prominent 10: Easing regulatory cycle towards the private economy and the continuing AI and technology breakthroughs should bode well for POE equity performance, and lead to rising market (cap) concentration in the listed POE sector over time. Against that backdrop, our analysis suggests that ten existing leaders—Chinese Prominent 10—appear well-placed to capitalize on their past success and to further elevate their dominance in the Chinese stock market, akin to the US Mag 7 stocks. These 10 stocks amount to US\$1.7tn in market cap and 40% of MSCI China index weight, trade US\$7.5bn a day, are expected by sell-side analysts to grow earnings by 13% (CAGR) in the next two years, and are priced at 18x fP/E and 0.9x fPEG.

图表 39: Our top-down framework suggests these 10 large-cap POEs could have the potential to further elevate their dominance in the equity market

- GS 15th FYP Portfolio: Our LLM-powered (FinBert) textual analysis, which enables us to extract and convert policy signals from the FYP documents into long-short strategies, shows that investors could have generated significant alpha if they had aligned their portfolios with broad policy trends. This portfolio contains 50 mid-cap stocks residing in 21 sub-sectors that are poised to benefit from policy tailwinds per our growth, valuation, and quality selection criteria. They have returned 58% in the past year in aggregate, trade at 26.5x fP/E and 1.1x fPEG, and are expected by consensus to produce 30% EPS CAGR in the next 2 years.

图表 40: Tech-related, and select cyclical and consumer industries appear well placed for policy support in the 15th FYP per our LLM-based textual analysis

资料来源: MSCI, FactSet, 高盛全球投资研究部

图表 41: Our textual analysis suggests that long-short strategies focusing on top- and bottom sectors based on the 5YP proposals and Government Work Reports could have generated substantial alpha in Chinese equities

资料来源: MSCI, FactSet, Data compiled by Goldman Sachs Global Investment Research, 高盛全球投资研究部

- **Going Global Leaders:** The strength of Chinese exports could result in global market share gains by Chinese companies, and contribute positively to their profits. We screen for 25 GS-Buy-rated companies that look well positioned to compete globally and monetize the overseas opportunities across 12 industry groups. These companies have on average generated 34% of their revenues overseas, and have gained 60% in the past 2 years. Half of the Chinese Prominent 10 companies also feature in this portfolio, as industry leaders with strong balance sheets and cashflows, possessing economies of scales and leading technology are better equipped to tap into the international market.

图表 42: Overseas revenue of all Chinese listed companies has grown from 12% in 2015 to 16% at present and is expected to reach 20% by the end of 2030

资料来源: 万得, FactSet, 高盛全球投资研究部

图表 43: Going Global Leaders portfolio spreads across 12 industry groups with Retailing, Capital Goods and Tech Hardware as the top sectors

资料来源: 万得, FactSet, 高盛全球投资研究部

- **GS Shareholder Returns Portfolio:** Cash returns by listed Chinese companies will likely reach another record high in 2026 (~Rmb4tn). We reiterate our strategic optimism on GS China Shareholder Returns Portfolio, which include 30 GS-Buy

rated names across 16 GICS Industry Groups. The selected stocks have already engaged in returning cash or recently responded to policy changes by increasing dividend payout ratios or participating in the buyback re-lending program. The list is liquid (US\$229mn ADT at median stock), currently trades at 10.5x forward P/E, and offers 5% cash yields (based on consensus/actual numbers). Our back-test shows that it has generated 68% total returns in the past 2 years (Sharpe Ratio of 1.8), outperforming MSCI China and CSI300 by 7pp and 25pp respectively. High and stable cash yields should add diversification benefits to an AI/Tech oriented portfolio.

图表 44: Total cash returns by listed Chinese companies could reach ~Rmb4tn in 2026

Overweights

Hardware Tech (upgrade from Neutral). A diverse sector hosting various product supply chains. Our Tech analysts are more positive on Smartphone, AI server/data center (including cooling), Semi, and physical AI proxies (e.g. robotics), but will be selective on PCs. Top-down, we see this sector as a key enabler and beneficiary of China's AI development and self-sufficient strategy.

Insurance: Premium growth has improved in 2H25 and could further benefit from the cash-to-investment trend as real rates fall. Stabilized bond yields and positive equity beta could boost investment incomes. Valuations remain attractive on 7.1x P/E and 1.0x P/B.

Materials: Sluggish property FAI will remain a demand drag for the sector but new infra and AI investments are new growth contributors. Anti-involution policy has marginally improved pricing in certain subsectors where overcapacity concerns are pronounced. Our commodity Strategists remain positive on precious metals, Gold in particular.

Media/entertainment: Content and gaming regulation easing will likely continue, and leading companies are proxies for AI and global expansion. They also possess relatively high earnings visibility in the Tech universe with inexpensively priced upside optionality from AI application and monetization.

(Online) Retailing: Platform companies are building a complete AI ecosystem,

spanning semi, LLM, data center, and AI applications. Losses in food delivery subsidy should moderate in 2026, and AI capex upside could be earnings-accretive. Growth/valuation tradeoff seems attractive vis-a-vis their US peers, with sector fPEG at 0.5.

Marketweights

Autos: Domestic car sales could decline modestly on GS forecast (-2%) in 2026 due to peaking government subsidy, renewal of car purchase tax, and a relatively high base in 2025 (+4%). Anti-involution policy has slowed the price declines in the domestic market, but so has the consolidation trend among industry players. Companies with the capacity and capability to expand overseas are more likely to come out on top.

Banks: A key manifestation of China's shareholder returns story, offering +5% dividend yield on 2026 consensus DPS with merely an aggregate 30% payout ratio. NIM may find the floor on falling deposit rates and loan growth could reach 8% on our analysts' estimate in 2026 led by public sector demand. NPLs may decline modestly as the credit profile for local government debt shores up.

Brokers/Diversified Financials: The operating environment has brightened on improved A-share market performance and trading/financing activity. However, headcount cost pressures are still in place, and hence, industry consolidation could be a key source of alpha in the sector where competition is fierce and profitability is slim.

Cap goods/Industrials: The outlook remains uninspiring due to the falling housing new starts, although bright spots exist. We see strong alpha opportunities in the sector, with companies exposed to import substitution, industry consolidation, overseas expansion, New Infra capex, AI and specific product supply chains more likely to prevail.

Consumer Services (downgrade from Overweight): We like the thematic appeal of the service economy but the sector is dominated by Food Delivery companies which have been subject to intense competition and ongoing, albeit moderating, subsidy losses. We would focus on Travel, Education, Entertainment and other "New" consumption cohorts for alpha.

F&B/Staples (upgrade from Underweight): This has been a laggard in the equity universe in the past year, reflecting the challenging product pricing environment amid continued disinflation pressures and policy risks (e.g. alcohol consumption). Valuations are at the low-end of the range, although broad-based earnings/profitability turnaround is not in sight yet. Top down, we prefer niche market players (e.g. Pet Food and energy drinks) and companies with a global expansion strategy.

Healthcare: The sector has significantly outperformed in 2025 on reduced regulatory uncertainty, strong "licensing out" trends, and a reviving IPO market. Many of these trends will likely extend into 2026 but selectivity is required to generate returns on re-rated valuations and earnings expectations. Our Healthcare team

prefers BioTech/Pharma and several CDMOs over equipment companies, retail Pharmacy, and TCM firms.

Semi: The offshore universe is dominated by solar panel makers where the supply/demand balance may gradually improve on the authorities' anti-involution bias. Semi supply-chain players, mostly reside in the A-share market, performed well in 2025 (+52%) triggered by the DeepSeek moment, favorable policy, and technology breakthroughs. The tech race between the US and China will likely create long-term winners in this space, and hence, industry leaders with strong government sponsorship, R&D capability, and technological advantages should outperform.

Utilities (upgrade from Underweight): AI has structurally raised the power consumption demand and the need for investment in power infrastructure segments. China's pursuit of green energy and anti-involution impacts could benefit electricity pricing. Stable and high dividend yields (5% based on 2026 consensus DPS).

Underweights

Durables (downgrade from Neutral): The momentum of global market share gains stays intact but weak domestic demand on moderating policy subsidy could present challenges to the sector following a high earnings base in 2025.

Energy: Against a backdrop where Brent could trade on average US\$56/bbl for 2026 (now at US\$61) per GS forecast, we see limited upside risks of revenues and earnings for the sector. Absolute valuations do not look demanding (10x P/E and 1x P/B) but the sector is trading close to cycle-high valuations on compressed dividend yields.

Property (downgrade from Neutral): Nationwide housing sales could drop 8% yoy in 2026 on our analysts' forecast, driven by 6% volume contraction as well as 3% ASP fall in the primary market. More aggressive policy support on destocking and mortgage rate cuts are necessary to foster a long-awaited price stabilization. Secondary market supply could be a risk (to primary market demand) and the outlook for non-residential real estate remains difficult. We'd still prefer SOE developers, property agents, and management companies for housing-related exposures.

Risks to monitor for 2026

Global recession

Our economists assign a 30% chance for the US/global economy going into recession over the next 12 months, double the unconditional historical average. A non-recessionary global backdrop is no doubt a key anchor to our positive market beta view, as the contrary would lead to disruption to Chinese growth and likely dislocation to the stock market, fundamentally and via financial market linkages. Empirically, MSCI China on average fell 30% from peak to trough in the 3 US recessions over the past 3 decades, although A-shares typically fared better given their low sensitivity to global equity beta and liquidity dynamics.

图表 47: A-shares should be more resilient in the case of US/global recession

US-China tensions

The US-China “trade truce” agreed post the in-person meeting between President Trump and President Xi In October has instilled stability to the bilateral trade relations but the competition and tensions between the two economic superpowers across other strategic cohorts—technology, capital markets, and geopolitics—will remain consequential for Chinese equity pricing until a new equilibrium can be reached. China’s reduced exports dependence on US demand, its progress on technology self-sufficiency, and Chinese companies’ leadership in manufacturing

and logistic supply chains globally might lower Chinese stocks' beta to the bilateral tensions. But, this will unlikely apply to left-tail events, such as geopolitical conflicts and/or financial markets decoupling, which would be detrimental to equities globally, let alone China.

图表 48: The equity markets are comparatively less sensitive to US-China risks than they were during Trade War 1.0

资料来源: MSCI, CSI, 高盛全球投资研究部

图表 49: Market-implied US-China tensions have recently eased

资料来源: 高盛全球投资研究部

AI exuberance

While our Global Equity Strategy Team argues that the US market is not in a bubble yet, they reiterate that high levels of market concentration and increased competition in the US AI space should warrant continued investor focus on diversification. In a scenario where AI optimism were to fade quickly on concerns such as low Return on Investment (ROI), circular investment, and elevated valuations, the contagion would likely be felt by Chinese AI proxies which have re-rated post the DeepSeek moment in late January. Low market cap concentration from AI stocks in China and their meaningful valuation discounts to the US comparables should nevertheless soften such a blow, in our view.

图表 50: The aggregate market cap of the top-10 Chinese AI-related companies is just at 1/10 of the size of their US counterparts

Top 10 US AI-related Companies^					Top 10 Chinese AI-related Companies^

Domestic policy risks

Historically, policy shocks in the form of abrupt market liquidity tightening, regulation changes, and policy delivery disappointments were responsible for derailing the bull runs. As emphasized, our central premise is that the pro-market policy window will stay open in the medium run but this is far from given. We will continue to reassess the circumstances and stress-test our policy assumptions to ensure that they are balanced and the downside risks are properly accounted for in our market forecasts. GS proprietary tools that might be helpful in framing and quantifying policy risks concerning the stock market include our [POE Regulation Proxy](#), [Equity Market Risk Barometer](#), and [A-share Retail Sentiment Proxy](#), all of which are updated regularly in our [China Weekly Kickstart publications](#).

Persistent disinflation and earnings recession

Recovering and re-accelerating profit growth, predicated on a robust revenue environment and a gradual normalization of corporate profitability, is at the core of our slow(er) bull market thesis and our positive return forecast for 2026. If disinflationary pressures persist on policy inaction, suboptimal capex, continued profitless competition, and lack of pricing discipline and profit maximization mindset, our constructive profit/margin assumptions and equity views will not transpire. We will closely monitor the pricing trends at the macro and industry levels, as well as global commodity prices, quarterly financial statements, consensus earnings revision, and policy events to comprehend the earnings cycle.

信息披露

法定披露

美国法定披露

任何本报告中研究企业所需的特定公司法定披露见上文：包括即将进行交易的承销商或副承销商，1%或其他股权，特定服务的补偿，客户关系种类，之前担任承销商或副承销商的公开发售，担任董事，担任股票做市及/或专家的角色。高盛担任或可能担任本报告中所涉及发行方的债券（或相关衍生品）的交易对手。

以下为额外要求的披露：股权及重大利益冲突：高盛的政策为禁止其分析师、分析师属下专业人员及其家庭成员持有分析师负责研究的任何公司的证券。分析师薪酬：分析师薪酬部分取决于高盛的盈利，其中包括投资银行的收入。分析师担任高级职员或董事：高盛的政策通常禁止其分析师、分析师属下人员及其家庭成员担任分析师负责研究的任何公司的高级职员、董事或顾问。非美国分析师：非美国分析师可能与高盛无关联，因此可以不受FINRA 2241条FINRA 2242条对于与所研究公司的交流、公开露面及交易分析师所研究证券的限制。

美国以外司法管辖区规定的额外披露

以下为除了根据美国法律法规规定作出的上述信息披露之外其他司法管辖区法律所要求的披露。澳大利亚: Goldman Sachs Australia Pty Ltd及其相关机构不是澳大利亚经授权的存款机构（1959年《银行法》所定义），因此不在澳大利亚境内提供银行服务，也不经营银行业务。本研究报告或本报告的其他形式内容只可分发给根据澳大利亚公司法定义的“批发客户”，在事先获得高盛许可的情况下可以有例外。在撰写研究报告期间，Goldman Sachs Australia全球投资研究部的职员可能参与本研究报告中所讨论证券的发行公司或其他实体组织的现场调研或会议。在某些情况下，如果视具体情形Goldman Sachs Australia认为恰当或合理，此类调研或会议的成本或部分或全部由该证券发行人承担。如本报告内容包含任何金融产品建议，则该建议仅为一般建议，且高盛提出该建议时并未考虑客户的目标、财务状况或需求。客户在就此类建议采取行动之前，应结合其自身目标、财务状况和需求来考虑该建议的适当性。高盛澳大利亚和新西兰的利益披露，以及高盛澳大利亚卖方研究独立性制度声明请参见

<https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html>。巴西: 与CVM Resolution n. 20相关的信息披露请参阅<https://www.gs.com/worldwide/brazil/area/gir/index.html>。根据CVM Resolution n. 20第20条，在适用的情况下，对本研究报告内容负主要责任的巴西注册分析师为本报告开头部分标明的第一作者，除非报告末另有说明。加拿大: 这些信息仅供您参考，在任何情况下都不应被理解为Goldman Sachs & Co. LLC对加拿大证券购买者进行有关任何加拿大证券交易的广告、要约或征求行为。Goldman Sachs & Co. LLC未在适用的加拿大证券法规下注册为任何加拿大司法管辖区内的交易商，通常不被允许交易加拿大证券，并且可能被禁止在加拿大某些司法管辖区内销售某些证券和产品。若您想在加拿大交易任何加拿大证券或其他产品，请联系 Goldman Sachs Canada Inc. (高盛集团的关联机构) 或其他已注册的加拿大交易商。香港: 可从高盛 (亚洲) 有限责任公司获取有关本报告中研究公司的证券的额外资料。印度: 可从高盛 (印度) 证券私人有限公司 (分析师 - 印度证券交易委员会(SEBI) 编号INH000001493, 地址10th Floor, Ascent-Worli, Sudam Kalu Ahire Marg, Worli, Mumbai-400 025, India, 公司编号 U74140MH2006FTC160634, 电话 +91 22 6616 9000, 传真 +91 22 6616 9001) 获取有关本报告中研究对象或所提及公司的额外资料。高盛可能持有本报告中研究对象或所提及公司的证券 (1956年印度《证券合同(管理)法》条款2(h)之定义) 的1%或更高比例。证券市场投资会受到市场风险的影响。请在投资之前仔细阅读所有相关文件。在SEBI注册并获得NISM认证并非对该中间机构表现的担保，亦不能对投资者回报做出保障。高盛 (印度) 证券私人有限公司投资者支持部门联系方式请参见<https://www.goldmansachs.com/worldwide/india/documents/Grievance-Redressal-and-Escalation-Matrix.pdf>，点击此链接<https://publishing.gs.com/content/site/india-annual-compliance-report.html>可获得年度审计合规报告副本。日本: 见下文。韩国: 除非高盛另行同意，本报告无论以何种方式取得，仅供《金融服务与资本市场法》定义的“专业投资者”使用。可从高盛 (亚洲) 有限责任公司首尔分公司获取有关本研究所研究公司的额外资料。新西兰: Goldman Sachs New Zealand Limited及其关联机构并非1989年新西兰储备银行法定义的“注册银行”或“存款机构”。本研究报告以及本报告的其他形式内容只可分发给2008年财务顾问法案定义的“批发客户”，在事先获得高盛许可的情况下可以有例外。高盛澳大利亚和新西兰的利益披露请参见<https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html>。俄罗斯: 在俄罗斯联邦分发的研究报告并非俄罗斯法律所定义的广告，而是不以产品推广为主要目的的信息和分析，也不属于俄罗斯法律所界定的评估行为。研究报告不构成俄罗斯法律规定的个性化投资建议，并非针对某个具体客户，在报告准备阶段也未分析客户的财务状况、投资特征或风险特征。高盛不对某个客户或任何其他人基于本报告可能做出的任何投资决策承担责任。新加坡: 高盛 (新加坡) 私人公司 (公司编号: 198602165W) (受新加坡金融管理局监管) 为本研究报告承担法律责任，若有由本研究报告所引发或与本研究报告相关的任何事宜，请联系高盛 (新加坡) 私人公司。台湾: 本信息仅供参考，未经允许不得翻印。投资者应当谨慎考虑他们自身的投资风险，投资结果由投资者自行负责。英国: 在英国根据金融市场行为监管局的定义可被分类为私人客户的人士参阅本报告的同时应当参阅高盛以往对本报告研究企业的研究报告，并应当参考高盛国际已经发给这些客户的风险警告资料。该风险警告资料副本，以及本报告中采用部分金融辞汇的解释可向高盛国际索取。

欧盟和英国: 与欧盟委员会实施条例 (EU) (2016/958) (欧盟议会和欧盟理事会条例(EU) No 596/2014的补充条款,规定了有关投资建议或其他投资策略的推荐或建议之信息的客观陈述,以及对特定利益或利益冲突进行披露的技术安排应达到的监管技术标准; 英国脱离欧盟和欧洲经济区之后该实施条例被纳入英国国内法律法规) 第(2)条相关的披露信息可在<https://www.gs.com/disclosures/europeanpolicy.html>上获取，该网址介绍在处理和投资研究有关的利益冲突时应参照的欧洲政策。

日本: 高盛证券株式会社是在关东财务局注册 (注册号: No. 69) 的金融工具交易商，同时也是日本证券业协会日本金融期货业协会、第二类金融工具公司协会、日本投资信托协会以及日本投资顾问协会的成员。关于日本证券交易所、日本证券交易商协会或日本证券金融公司所要求的适用的信息披露，请参见与公司有关的法定披露部分。

全球产品；分发机构

高盛全球投资研究部在全球范围内为高盛的客户制作并分发研究产品。高盛分布在其全球各办事处的分析师提供行业和研究，以及宏观经济、货币、商品及投资组合策略的研究。本研究报告在澳大利亚由Goldman Sachs Australia Pty Ltd (ABN 21 006 797 897) 分发；在巴西由Goldman Sachs do Brasil Corretora de Títulos e Valores Mobiliários S.A.分发；Public Communication Channel Goldman Sachs Brazil: 0800 727 5764和/或contatogoldmanbrasil@gs.com。工作日 (假期除外) 上午9点至下午6点。Canal de Comunicação com o Público Goldman Sachs Brasil: 0800 727 5764 e/ou contatogoldmanbrasil@gs.com。Horário de funcionamento: segunda-feira à sexta-feira (exceto feriados), das 9h às 18h; 在加拿大由Goldman Sachs & Co. LLC 分发；在香港由高盛 (亚洲) 有限责任公司分发；在印度由高盛 (印度) 证券私人有限公司分发；在日本由高盛证券株式会社分发；在韩国由高盛 (亚洲) 有限责任公司首尔分公司分发；在新西兰由Goldman Sachs New Zealand Limited 分发；在俄罗斯由高盛OOO 分发；在新加坡由高盛 (新加坡) 私人公司 (公司号: 198602165W) 分发；在美国由高盛集团分发。高盛国际已批准本研究报告在英国分发。

高盛国际 (由审慎监管局授权并接受金融市场行为监管局和审慎监管局的监管) 已批准本研究报告在英国分发。

欧洲经济区: Goldman Sachs Bank Europe SE是一家在德国注册成立的信贷机构，在单一监管机制下接受欧洲央行的直接审慎监督，在其他方面接受德国联邦金融监管局(Bundesanstalt für Finanzdienstleistungsaufsicht, BaFin)和德国联邦银行的监督，由该机构向欧洲经济区内分发研究报告。

一般性披露

本研究报告仅供我们的客户使用。除了与高盛相关的披露，本研究报告是基于我们认为可靠的目前已公开的信息，但我们不保证该信息的准确性和完整性，客户也不应该依赖该信息是准确和完整的。报告中的信息、观点、估算和预测均截至报告的发表日，且可能在不事先通知的情况下进行调整。我们会适时地更新我们的研究，但各种规定可能会阻止我们这样做。除了一些定期出版的行业报告之外，绝大多数报告是在分析师认为适当的时候不定期地出版。

高盛是一家集投资银行、投资管理和证券经纪业务于一身的全球性综合服务公司。全球投资研究部所研究的大部分公司与我们保持着投资银行业务和其它业务关系。美国证券经纪交易商高盛是SIPC(<https://www.sipc.org>)的成员。

我们的销售人员、交易员和其它专业人员可能会向我们的客户及自营交易部提供与本研究报告中的观点截然相反的口头或书面市场评论或交易策略。我们的资产管理部门、自营交易部和投资业务部可能会做出与本报告的提议或表达的意见不一致的投资决策。

我公司及其关联机构、高级职员、董事和雇员，除法规及高盛的制度所禁止的情况外，将不时地对本研究报告所涉及的证券或衍生工具持有多头或空头头寸，担任上述证券或衍生工具的交易对手，或买卖上述证券或衍生工具。

在高盛组织的会议上的第三方演讲嘉宾（包括高盛其它部门人员）的观点不一定反映全球投资研究部的观点，也并非高盛的正式观点。

在此提到的任何第三方，包括销售人员、交易员和其它专业人士或其家庭成员，可能持有本报告提及的且与本报告分析师所表达的观点不一致的产品头寸。

本报告重点关注整体市场、行业以及板块的投资主题，而无意区分任何我们所描述的行业或板块中具体公司的前景或表现、或对此进行分析。

本报告中与行业或板块内一只或多只股票或信贷证券相关的交易建议是对所讨论投资主题的反映，而并非对该证券的孤立的交易建议。

在任何要约出售股票或征求购买股票要约的行为为非法的司法管辖区内，本报告不构成该等出售要约或征求购买要约。本报告不构成个人投资建议，也没有考虑到个别客户特殊的投资目标、财务状况或需求。客户应考虑本报告中的任何意见或建议是否符合其特定状况，以及(若有必要)寻求专家的意见，包括税务意见。本报告中提及的投资价格和价值以及这些投资带来的收入可能会波动。过去的表现并不代表未来的表现，未来的回报也无法保证，投资者可能会损失本金。外汇汇率波动有可能对某些投资的价值或价格或来自这一投资的收入产生不良影响。

某些交易，包括牵涉期货、期权和其它衍生工具的交易，有很大的风险，因此并不适合所有投资者。投资者可以向高盛销售代表取得或通过<https://www.theocc.com/about/publications/character-risks.jsp>和https://www.goldmansachs.com/disclosures/cftc_fcm_disclosures取得当前期权和期货的披露文件。对于包含多重期权买卖的期权策略结构产品，例如，期权差价结构产品，其交易成本可能较高。与交易相关的文件将根据要求提供。

全球投资研究部提供的不同服务层级：根据您对接收沟通信息的频率和方式的个人偏好、您的风险承受能力、投资重心和视角（例如整体市场、具体行业、长线、短线）、您与高盛的整体客户关系的规模和范围、以及法律法规限制等各种因素，高盛全球投资研究部向您提供的服务层级和类型可能与高盛提供给内部和其他外部客户的服务层级和类型有所不同。例如，某些客户可能要求在关于某个证券的研究报告发表之时收到通知，某些客户可能要求我们将内部客户网上提供的分析师基本面分析背后的某些具体数据通过数据流或其它途径以电子方式发送给他们。分析师基本面研究观点（如股票评级、目标价格或盈利预测大幅调整）的改变，在被纳入研究报告、并通过电子形式发表在内部客户网上或通过其它必要方式向有权接收此类研究报告的所有客户大范围发布之前，不得向任何客户透露。

所有研究报告均以电子出版物的形式刊登在我们的内部客户网上并向所有客户同步提供。并非所有研究内容都转发给我们的客户或者向第三方整合者提供，高盛也并不对由第三方整合者转发的我们研究报告承担任何责任。如需了解可向您提供的有关一个或多个证券、市场或资产类别的研究报告、模型或其它数据（包括相关服务），请联络您的高盛销售代表或登陆<https://research.gs.com>。

披露信息可以查阅<https://www.gs.com/research/hedge.html>或向研究合规部索取，地址是200 West Street, New York, NY 10282。
